Subject: Proposed Amazon Warehouse
Date: Thursday, July 10, 2025 12:38:57 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I live across 217 from the proposed warehouse being discussed July 15th.

I am concerned as Amazon is a 24hr 7 day a week business that the noise from trucks will disrupt my peace and quiet and even more importantly will keep my up at night.

We already need to tolerate the airport noise and the past two years the construction on the freeway, but the warehouse could be much worse.

Please is you decide to approve the building that there is in place plans to negate the noise that will most likely come from this business.

IE: sound wall, no backup trucks beeping, quiet times during evening hours.

Thank you and I hope you seriously consider how this will impact 200 families in my community.

**Re: Comment on Sywest Industrial Building Project Environmental
Impact Report; Item C.3, July 15, 2025 City Council Meeting**

Dear Mayor Perotte, Mayor Pro Temp Kasdin, and Honorable Councilmembers:

The following comments are submitted on behalf of Supporters Alliance for Environmental Responsibility ("SAFER") regarding the Sywest Industrial Building Project ("Project") and the Environmental Impact Report ("EIR") prepared for the Project. This Project will be heard as agenda item C.3 at the July 15, 2025 City Council Meeting.

SAFER is concerned that approval of the Project and certification of the EIR will violate the California Environmental Quality Act ("CEQA") by failing to adequately disclose and mitigate impacts to sensitive biological resources and failing to adequately respond to comments from the California Department of Fish and Wildlife and others. These comments were prepared with the assistance of expert ecologist Shawn Smallwood, Ph.D. Dr. Smallwood's comments and CV are attached hereto as Exhibit A.

SAFER respectfully requests that the City Council refrain from approving the Project at this time and instead direct staff to revise and recirculate the EIR.

Project Description

The Project proposes the construction of a 70,594 square-foot industrial building on an 11.77-acre parcel at 907 South Kellogg Avenue in Goleta, California. It also includes the destruction of an existing movie screen, concessions stan, projector building, two drive through

ticket booths, one walk-in ticket booth, an agricultural box, and a dewatering well. The industrial building could be divided up into four sections and made available for up to four tenants.

San Jose Creek is located directly southeast of the Project site and Old San Jose Creek is located west of the Project. Tidal wetland is located southeast of the Project site that includes the Goleta Slough Ecological Reserve, which contains breeding populations of Belding's savannah sparrow, a CESA listed endangered species. The purpose of the ecological reserve is to protect critical coastal salt marsh habitat. San Jose Creek is designated as an Environmentally Sensitive Habitat Area in the Conservation element of the City's General Plan.

LEGAL STANDARD

CEQA has two primary purposes. First, CEQA is designed to inform decision makers and the public about the potential, significant environmental effects of a project. (14 CCR § 15002(a)(1).) "Its purpose is to inform the public and its responsible officials of the environmental consequences of their decisions before they are made. Thus, the EIR 'protects not only the environment but also informed self-government.'" (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.) Second, CEQA requires public agencies to avoid or reduce environmental damage when "feasible" by requiring "environmentally superior" alternatives and all feasible mitigation measures. (14 CCR § 15002(a)(2) and (3); see also *Berkeley Jets Over the Bay Com. v. Board of Port Cmrs.* (2001) 91 Cal.App.4th 1349, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.)

CEQA requires that an agency analyze the potential environmental impacts of its proposed actions in an Environmental Impact Report (EIR) except in certain limited circumstances. (See, e.g., Pub. Resources Code, § 21100.) The EIR is the very heart of CEQA. (*Dunn-Edwards v. BAAQMD* (1992) 9 Cal.App.4th 644, 652. The EIR is an "environmental 'alarm bell' whose purpose is to alert the public and its responsible officials to environmental changes before they have reached the ecological points of no return." (*Bakersfield Citizens for Local Control v. City of Bakersfield* (2004), 124 Cal.App.4th 1184, 1220.) The EIR also functions as a "document of accountability," intended to "demonstrate to an apprehensive citizenry that the agency has, in fact, analyzed and considered the ecological implications of its action." (*Laurel Heights Improvements Assn. v. Regents of Univ. of Cal.* (1988) 47 Cal.3d 376, 392.)

The EIR serves to provide agencies and the public with information about the environmental impacts of a proposed project and to "identify ways that environmental damage can be avoided or significantly reduced." (14 CCR § 15002(a)(2).) Critical to this purpose, the EIR must contain an "accurate and stable project description." (*County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185 at 192-93 ("An accurate, stable and finite project description is the *sine qua non* of an informative and legally sufficient EIR.") The project description must contain (a) the precise location and boundaries of the proposed project, (b) a statement of the

project objectives, and (c) a general description of the project's technical, economic, and environmental characteristics. (14 CCR § 15124.)

The California Supreme Court has emphasized that:

When reviewing whether a discussion is sufficient to satisfy CEQA, a court must be satisfied that the EIR (1) includes sufficient detail to enable those who did not participate in its preparation to understand and to consider meaningfully the issues the proposed project raises [citation omitted] . . .

(*Sierra Club v. Cty. of Fresno* (2018) 6 Cal.5th 502, 510 (2018) [citing *Laurel Heights Improvement Assn.*, 47 Cal.3d at 405].) The Court in *Sierra Club v. Cty. of Fresno* also emphasized that another primary consideration of sufficiency is whether the EIR “makes a reasonable effort to substantively connect a project’s air quality impacts to likely health consequences.” (*Id.* at 510.) “Whether or not the alleged inadequacy is the complete omission of a required discussion or a patently inadequate one-paragraph discussion devoid of analysis, the reviewing court must decide whether the EIR serves its purpose as an informational document.” (*Id.* at 516.)

Although an agency has discretion to decide the manner of discussing potentially significant effects in an EIR, “a reviewing court must determine whether the discussion of a potentially significant effect is sufficient or insufficient, i.e., whether the EIR comports with its intended function of including ‘detail sufficient to enable those who did not participate in its preparation to understand and to consider meaningfully the issues raised by the proposed project.’” (*Sierra Club*, 6 Cal.5th at 516 [citing *Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1197].) “The determination whether a discussion is sufficient is not solely a matter of discerning whether there is substantial evidence to support the agency’s factual conclusions.” (*Id.* at 516.) As the Court emphasized:

[W]hether a description of an environmental impact is insufficient because it lacks analysis or omits the magnitude of the impact is not a substantial evidence question. A conclusory discussion of an environmental impact that an EIR deems significant can be determined by a court to be inadequate as an informational document without reference to substantial evidence.

(*Id.* at 514.) Additionally, “in preparing an EIR, the agency must consider and resolve every fair argument that can be made about the possible significant environmental effects of a project.” (*Protect the Historic Amador Waterways v. Amador Water Agency* (2004) 116 Cal.App. 4th 1099, 1109.)

DISCUSSION

I. The EIR Fails to Adequately Disclose and Mitigate the Project's Impacts on Biological Resources.

SAFER retained expert ecologist Dr. Shawn Smallwood, Ph.D., to review the EIR , and to provide an analysis of the Project's impacts on biological resources. Dr. Smallwood's comment and CV are attached hereto as **Exhibit A**.

As discussed below, Dr. Smallwood found that: (1) the EIR relies on an outdated baseline for biological resources; (2) the EIR underestimates the diversity of species on site and the Project's likely impacts to those species; (3) the EIR fails to provide substantial evidence of the Project's impacts; and (4) the EIR fails to assess or mitigate the Project's impacts to species due to habitat loss, movement impacts, traffic mortality, and cumulative impacts.

A. The EIR relies on an outdated baseline.

The EIR fails to adequately describe the environmental setting against which the Project's environmental impacts are to be measured. This impedes the fundamental purpose of the environmental review process, which is to determine whether there is a potentially substantial, adverse change compared to the existing setting.

Before analyzing a project's impacts, an EIR must first identify and describe "the physical environmental conditions in the vicinity of the project ***as they exist at the time the notice of preparation is published*** or if no notice of preparation is published, at the time environmental analysis commenced." (14 CCR § 15125(a) [emph. Added].) This information is critical to the EIR's impact analysis because it serves as the baseline against which a project's predicted effects can be described and quantified. (14 CCR § 15125(a); *Neighbors for Smart Rail v. Exposition Metro Line Construction Authority* (2013) 57 Cal.4th 439, 447 (*Smart Rail*).) A description of important environmental resources that will be adversely affected by the project is critical to a legally adequate discussion of the environmental setting, and emphasis is to be placed on rare or unique environmental resources when describing the environmental setting. (14 CCR § 15125(c); *San Joaquin Raptor/Wildlife Rescue Ctr. v County of Stanislaus* (1994) 27 Cal.App.4th 713, 722-30.) The significance of a project's impacts cannot be measured unless the EIR first establishes the actual physical conditions on the property. (*Save Our Peninsula Comm. v. Monterey Cty. Bd. of Supervisors*, 87 Cal. App. 4th 99, 125 (2001) (internal citations omitted).)

Here, the Notice of Preparation was published in May 2023, yet the EIR reports baseline conditions for biological resources based on site visits conducted six years earlier, in 2017, documented in a 2017 report prepared by Tierney (the "2017 Tierney Report"). While a "peer-review" was conducted of the 2017 Tierney Report in 2023 by Watershed Environmental, there is no evidence that an updated site visit was conducted. As a result, the 2023 report does not provide updated baseline of conditions at the time when environmental review began. Reliance

on this outdated baseline violates CEQA and has skewed the analysis of impacts on biological resources.

San Jose Creek runs adjacent to the Project site and is critical habitat for both the Southern California steelhead and tidewater goby, both listed as endangered under the federal Endangered Species Act. In his recent site visit, Dr. Smallwood observed riparian vegetation along this stretch as dense and lush, with robust wildlife. (Smallwood, p. 19.) Photographs taken by Dr. Smallwood depict it as covered in ruderal vegetation and include an abundance of species. (Smallwood, p. 18.) In contrast, the 2017 Tierney Report concludes that “[t]he lack of riparian vegetation along this stretch diminishes habitat value” (Tierney, p. 13) and “[i]n general, the project site is not expected to support a very diverse wildlife population due to its highly degraded condition and the extent of developed areas that surround the property.” (Tierney, p. 9.) In addition, the photos of the site in the Tierney Report misleadingly show bare pavement. The Tierney Report does not report baseline conditions in 2023. A revised EIR must be prepared that accurately presents baseline conditions at the time when environmental review began in 2023.

B. The EIR underestimates the diversity of species using the Project site.

Based on an outdated survey, the EIR concludes that “In general, the project site is not expected to support a very diverse wildlife population since it is paved and lacks native vegetation.” (FEIR, 4.3-12.) Based on the updated observations of the site, this conclusion is plainly inaccurate. Indeed, having conducted hundreds of surveys at proposed project sites across California, this site was second to only one other in its diversity and abundance of species detected by Dr. Smallwood. (Ex. A, 19.)

Dr. Smallwood and his associate Noriko Smallwood, MS, conducted a 3.5-hour site visit on April 21, 2025 and a 1.5 hour nocturnal survey that night. (Ex. A, p. 2.) During that time, they detected 50 species of vertebrate wildlife at or adjacent to the Project site, including 10 species with special status, including double-crested cormorant, white-tailed kite, Cooper’s hawk, red-tailed hawk, western gull, California gull, turkey vulture, and five special status species of bats. (*Id.* at 2, 11-12.) Dr. Smallwood calculated that more thorough site visits would reveal an even greater diversity of wildlife. (Ex. A, 12-15.) Based on his review of the EIR and the site visit, Dr. Smallwood concluded that “the large number of species I predict at the project site is indicative of a species-rich wildlife community that warrants a serious survey effort.” (*Id.* at 17.)

C. The EIR’s Biological Report cannot be relied upon to determine the Project’s impacts to biological resources.

Dr. Smallwood identified numerous deficiencies in the biological reports relied on by the EIR. As a result of these deficiencies, the EIR’s conclusion that impacts to biological resources would be less than significant with proposed mitigation is unsupported by substantial evidence and should not be relied upon by the City. Instead, the biological resources section of the EIR should be revised and recirculated for public review and comment.

First, as discussed above, with only a single wildlife survey conducted eight years ago,

the characterization of wildlife at the Project site is outdated and incomplete. (Ex. A, p. 23.)

Second, the EIR improperly screened out many special-status species from further consideration by concluding only a single database, the California Natural Diversity Data Base (“CNDDDB”), to characterize the baseline environmental setting at the Project site. (Ex. A, p. 24.) However, as Dr. Smallwood explains, “CNDDDB is not designed to support absence determinations or to screen out species from characterization of a site’s wildlife community.” (*Id.*). By consulting multiple databases in addition to CNDDDB, including iBird and iNaturalist, Dr. Smallwood found that 136 special-status species are known to occur near enough to the Project site to warrant further analysis. (*Id.*, pp. 26.) Yet, the EIR only analyzed the occurrence likelihood for 22 of those species. (*Id.*, p. 26.)

Moreover, for some of the species determined not to be expected at the Project site by Tierney, no explanation was provided and were indeed proven inaccurate by the survey results of Dr. Smallwood, including for white-tailed kite, Cooper’s hawk, Cassin’s kingbird, and blue-gray gnatcatcher. (Ex. A, p. 24.) Each of these species is dismissed in the EIR as not expected to occur, yet Dr. Smallwood detected these species during his survey.

Similarly, the 2017 Tierney Report state that “Shorebirds known from the Goleta Slough, including great egret (potential nesting), great blue heron (nesting), double-crested cormorant (roosting), rock dove, starling, Caspian tern, brown pelican, snowy egret, mallard, and violet-green swallow, may visit the culverted creek, although they are not expected to nest anywhere near the project site (Semonsen, 2017, SBFC, 2008).” Yet Dr. Smallwood observed great egrets, great blue heron, and pairs of mallards on or adjacent to the site during breeding season and a double-crested cormorant collecting nest material. (Ex. A, 21.) The Tierney conclusion is simply inaccurate.

Dr. Smallwood’s comments list many more deficiencies in the EIR and its supporting biological reports. Taken together, the EIR underestimates the likelihood of special-status species occurring at the site and cannot be relied on to conclude that impacts would be less than significant.

D. The EIR failed to disclose and mitigate the Project’s biological impacts due to habitat loss, wildlife movement, window collisions, and road mortality.

Dr. Smallwood found that the EIR failed to adequately discuss numerous significant impacts on biological resources including impacts to bats, habitat loss, movement impacts, traffic mortality, and cumulative impacts. (Ex. A, pp. 33-39.) By failing to disclose and mitigate these impacts, the EIR is inadequate and cannot be relied upon to conclude that impacts will be less than significant. As such, the EIR must be revised to account for the impacts discussed below.

1. Impacts to special-status bats

The EIR concludes that the Project will not significantly impact special-status species of

bats, yet no detection surveys were conducted for these species. (Ex. A, p. 40.) In contrast, Dr. Smallwood performed a bat survey using a Sonobat detector and in only 1.5 hours detected five species of bats, including three special status species. (Ex. A, pp. 2, 40.) Dr. Smallwood concludes that by removing habitat for these special status species, the Project will have a significant impact. This impact must be analyzed and mitigated in a revised EIR.

2. Habitat loss.

Dr. Smallwood found that the EIR failed to fully account for the impacts to wildlife from the loss of habitat. (Ex. A, pp. 34-35.) Specifically, it did not analyze the loss of breeding capacity that would result from Project-generated habitat loss. While habitat loss results in the immediate decline in birds and other animals, it also results in a permeant loss of productive capacity. Based on studies of other areas with similar habitat type and his ongoing study, Dr. Smallwood predicts that the Project would result in a significant loss of more than 17 nests, 24 nest attempts, and 71 fledglings per year. (Ex. A, p. 34-35.) Taken together, Dr. Smallwood predicts a loss of 80 birds per year. (*Id.*, p. 35.)

Dr. Smallwood indicates that most, if not all, of these lost birds are protected by the federal Migratory Bird Treaty Act and the California Migratory Bird Protection Act. (*Id.*) Therefore, Dr. Smallwood concludes the loss of 80 protected birds would be a significant impact. (*Id.*) The EIR must be revised and recirculated to adequately evaluate the impacts to biological resources from habitat loss.

3. Wildlife Movement

Dr. Smallwood found that the EIR applied improper standards to conclude that the Project's impacts to wildlife movement would not be significant. (Ex. A, pp. 35.) According to the EIR, impacts to wildlife movement would not be significant because, it claims, the site is not part of a well-functioning wildlife corridor, implying that only disruption of the function of a wildlife corridor can interfere with wildlife movement in the region. However, the EIR's reasoning is flawed.

The EIR's reliance on the fact that the site is not a "wildlife corridor" is misplaced. "The CEQA standard goes to wildlife movement **regardless of whether the movement is channeled by a corridor.**" (Ex. A, p. 35 [emphasis added].) Even if the Project site is not a wildlife corridor, the impacts can still be significant because, as Dr. Smallwood explains:

[A] site such as the project site is critically important for wildlife movement because it composes an increasingly diminishing area of open space within a growing expanse of anthropogenic uses, forcing more species of volant wildlife to use the site for stopover and staging during migration, dispersal, and home range patrol (Warnock 2010, Taylor et al. 2011, Runge et al. 2014). The project would cut wildlife off from stopover and staging opportunities, forcing volant wildlife to travel even further between remaining stopover sites.

(*Id.*, p. 35.)

The EIR's conclusion that the Project will not impact wildlife movement is not supported by any study or program of observation to characterize how wildlife use the Project site for movement in the region. (*Id.*) By contrast, during his survey Dr. Smallwood noted many volant species moving to and from the Project site. (*Id.*, pp. 35-36.) As a result, he concludes the Project site is important to wildlife in the region, and a loss of the Project site to development would result in a significant impact to biological resources. The impacts identified by Dr. Smallwood would be significant and must be addressed and mitigated in a revised EIR. (*Id.*)

4. Traffic Mortality

The EIR fails to address the impacts to wildlife from collisions with traffic generated by the Project. (Ex. A, pp. 36-38.) Based on the Project's annual predicted vehicle miles traveled, Dr. Smallwood calculates that traffic from the Project will kill at least 647 vertebrate animals per year. (*Id.*) Especially due to the special-status species likely to occur at or near the Project, these collisions represent a significant impact to wildlife that must be addressed, discussed, and mitigated in a revised EIR.

5. Cumulative Impacts

The EIR improperly concludes that the Project's cumulative impacts to biological resources will not be significant because the Project-level impacts and those of other related projects will be less than significant with mitigation. However, this conclusion ignores that "[c]umulative impacts can result from individually minor but collectively significant projects taking place over a period of time." (14 CCR § 15355(b).) Therefore, the question of whether there will be cumulative impacts is a distinct question from whether the Project itself will have significant impacts. The EIR does not contain any such information to answer this question and, as a result, fails to provide substantial evidence that cumulative biological impacts would be less than significant.

II. The City Must Adopt Alternative 2 to Reduce Significant and Unavoidable Impacts to Biological Resources and Land Use Impacts.

Where a project is found to have significant and unavoidable impacts, CEQA requires the adoption of a feasible alternative that meets most of the project objectives but results in fewer significant impacts. (*Citizens of Goleta Valley v. Bd. of Supervisors* (1988) 197 Cal.App.3d 1167, 1180-81; *see also, Burger v. County of Mendocino* (1975) 45 Cal.App.3d 322) A "feasible" alternative is one that is capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social and technological factors. (Pub. Res. Code § 21061.1; 14 CCR § 15364.)

Here, the EIR concluded that the Project will have a significant and unavoidable impact because construction and operation of the project is inconsistent with the General Plan

Conservation Element Policy 2.2, which requires a 100-foot buffer from San Jose Creek Streamside Protection Area and the project would preclude streamside protected area restoration under the General Plan Conservation Element Policy 2.6. (EIR ES-15.) The EIR also included an analysis of a 100-foot Streamside Protection Area Setback alternative (“Alternative 2”) that would avoid development within the San Jose Creek 100-foot SPA buffer “to the extent feasible.” (EIR ES-6.) The EIR concluded that Alternative 2 would reduce the Project’s significant and unavoidable impacts to biological resources and land use impacts. There is no evidence that Alternative 2 is infeasible. As a result, the City must adopt Alternative 2 to mitigate the Project’s significant land use impact.

III. The FEIR Fails to Adequately Respond to Comments from California Department of Fish and Wildlife.

“Where comments from responsible experts or sister agencies disclose new or conflicting data or opinions that cause concern that the agency may not have fully evaluated the project and its alternatives, these comments may not simply be ignored. There must be good faith, reasoned analysis in response.” *Berkeley Keep Jets Over the Bay Com. v. Board of Port Cmrs.*, (2001) 91 Cal.App.4th 1344, 1367 (“*Berkeley Jets*”) (EIR inadequate due to failure to respond to expert evidence on toxic air contaminants). An agency’s responses to comments must specifically explain the reasons for rejecting suggestions received in comments and for proceeding with a project despite its environmental impacts. Such explanations must be supported with specific references to empirical information, scientific authority, and/or explanatory information. (*Cleary v. County of Stanislaus* (1981) 118 Cal.App.3d 348, 357.) The responses, moreover, must manifest a good faith, reasoned analysis; conclusory statements unsupported by factual information will not suffice. (*People v. County of Kern* (1974) 39 Cal.App.3d 830, 841.) The need for a reasoned, factual response is particularly acute when critical comments are submitted by other agencies or by experts. (See *Berkeley Jets*, 91 Cal.App.4th at 1367, 1371; *People v. County of Kern* (1976) 62 Cal.App.3d 761, 772.)

The California Department of Fish and Wildlife (“CDFW”) submitted a comment on the draft EIR, raising concerns over the Project’s impacts on plants and wildlife and making recommendations for the final EIR. However, the final EIR failed to adopt the recommendations of CDFW and did not meaningfully respond to the comment with a good-faith explanation of why the recommendations were ignored.

1. Belding’s savannah sparrow

CDFW commented that the 250-foot avoidance and survey buffer proposed in the DEIR’s Mitigation Measure BIO-2 is not sufficient to reduce impacts to Belding’s savannah sparrow to less than significant. “Inadequate avoidance, minimization, and mitigation measures for impacts on Belding’s savannah sparrow will result in the Project continuing to have substantial direct, indirect, and cumulative effect...” (CDFW, p. 4.) CDFW’s comments are substantial evidence that impacts to Belding’s savannah sparrow are will not be less-than-significant. The City refused to revise Mitigation Measure 2 and failed to adequately respond to CDFW’s comment.

In response to CDFW's comment, rather than amending the mitigation measures, the FEIR downplays the likelihood of Belding's savannah sparrow to be found on the project site. The limited potential for Belding's savannah sparrow to occur does not address CDFW's comment regarding what should take place if the endangered species *is found* during project construction and operation. The EIR admits that the species has the potential to nest in pickleweed in Old San Jose Creek or San Jose Creek within 250-feet of the project site. (FEIR, 7-6.)

The FEIR then dismisses the potential for noise to impact Belding's Savannah Sparrow because: 1) significant noise impacts during construction would be limited to 15 months, and 2) operational noise would not exceed applicable noise standards. (FEIR, 7-6.) Neither of these explanations are evidence that the Project's noise would not significantly impact Belding's Savannah Sparrow. First, the fact that construction noise will only occur during the construction phase is irrelevant. CDFW notes that "[d]isturbances too close to the nest may impact the parents' ability to forage effectively and reduce nestlings' changes of survival." (CDFW, p. 4.) This is true regardless of whether the noise disturbance occurs during operation or a limited construction period. Second, consistency with *human* noise standards is also irrelevant to whether the Project's noise will impact biological resources.

The FEIR also claims without any evidence that the 250-foot buffer will adequately protect the Belding's savannah sparrow from any lighting impacts.

Finally, the FEIR does not adopt CDFW's recommendation for an additional mitigation measure requiring coordination with CDFW and obtaining take authorization from CDFW if Belding's savannah sparrow is detected. The FEIR claims it is not necessary because MM Bio-2 requires a city-approved biologist to contact CDFW within 48 hours of detecting a nest on site. This is not a good faith response to CDFW's suggestion that the developer obtain take authorization if a Belding's savannah sparrow is detected.

2. Crotch's bumble bee.

The DEIR states that Crotch's bumble bee has the potential to occur due to suitable habitat on site, but no mitigation measures were proposed. According to CDFW, the "Project's ground and vegetation disturbance could result in potentially significant impacts to Crotch's bumble bee, including loss of foraging resources, changes in foraging behavior, burrow collapse, nest abandonment, reduced nest success, reduced health and vigor of eggs, young, and/or queens, and direct mortality." (CDFW, p. 6.) The Project site is within the Crotch's bumble bee's range, and multiple observations of Crotch's bumble bee have occurred within one mile of the site.

CDFW commented that none of the mitigation measures call for focused surveys for Crotch's bumble bee and for construction to be halted if the species is detected during preconstruction surveys. CDFW concludes that this may result in undetected significant impacts to Crotch's bumble bee including unauthorized take of a candidate endangered species under the California Endangered Species Act.

CDFW proposed a mitigation measure requiring focused surveys that follow CDFW's survey method for Crotch's bumble bee. (CDFW p. 7.) If Crotch's bumble bee is detected, CDFW proposed consultation with CDFW to obtain take authorization prior to any ground disturbing activities. (*Id.*)

Similar to its response to CDFW's comments on the Belding's savannah sparrow, the FEIR improperly dismisses CDFW's concerns about Crotch's bumble bee by claiming the species has a low potential to occur. This is not a good faith response to CDFW's concerns that the Project will have a significant an unmitigated impact on a candidate endangered species.

3. Native Plants

CDFW commented that the EIR should add a mitigation measures to restricting the Project to use only native plant species. CDFW explained that non-native plants "reduce the value of habitat for native wildlife and risk overtaking existing native plants, thereby type converting adjacent habitat." (CDFW, p. 7.) "By not requiring all native trees and plants to be replaced by similar native trees and plant species, the replacement trees would not be fully mitigating the function and value of the impacted native tree species." (CDFW, p. 8.)

The FEIR responded by stating that no plants considered invasive are included in the preliminary plant palette. This response is inadequate. First, while invasive species may not be in the preliminary plant palette, there is no mitigation measures prohibiting the use of invasive species, as CDFW requested. Second, the FEIR ignored CDFW's concerns with replacing native species with non-native species. This is not a good faith, reasoned response.

The FEIR's response to CDFW's comments are conclusory, not supported by evidence, and do not demonstrate a good faith effort to grapple with the concerns raised by CDFW.

CONCLUSION

For the forgoing reasons, SAFER respectfully requests that Project's environmental impact report be revised to adequately analyze and mitigate significant impacts and ensure compliance with CEQA. A revised EIR should be prepared and recirculated to address these comments. Thank you for your attention to these comments.

Sincerely,

RE: Sywest Industrial Building

Dear Mr. Hiefield,

I write to comment on potential impacts to biological resources from the proposed Sywest Industrial Building, which I understand would add a 70,594 square-foot warehouse and 101 parking spaces and six loading zones (6.75 acres of development) on 11.77 acres at 907 South Kellogg Ave in Goleta, California. The project applicant also requests a reduction of the 100-foot stream buffer of General Plan Policy CE 2.2, *Streamside Protection Areas* to 25 feet. Herein I comment on the FEIR's analyses of potential project impacts to biological resources.

My qualifications for preparing expert comments are the following. I hold a Ph.D. degree in Ecology from University of California at Davis, where I also worked as a post-graduate researcher in the Department of Agronomy and Range Sciences. My research has been on animal density and distribution, habitat selection, wildlife interactions with the anthroposphere, and conservation of rare and endangered species. I authored many papers on these and other topics. I served as Chair of the Conservation Affairs Committee for The Wildlife Society – Western Section. I am a member of The Wildlife Society and Raptor Research Foundation, and I've lectured part-time at California State University, Sacramento. I was Associate Editor of wildlife biology's premier scientific journal, *The Journal of Wildlife Management*, as well as of *Biological Conservation*, and I was on the Editorial Board of *Environmental Management*. I have performed wildlife surveys in California for thirty-seven years. My CV is attached.

THE WILDLIFE COMMUNITY AS BIOLOGICAL RESOURCE

Most environmental reviews pursuant to the California Environmental Quality Act (CEQA) focus on special-status species because CEQA's Checklist Evaluation of Environmental Impacts specifies that such evaluation includes potential impacts to special-status species. However, an important policy of CEQA is "to prevent the elimination of fish or wildlife species due to man's activities, insure that fish and wildlife populations do not drop below self-perpetuating levels, and preserve for future generations representations of all plant and animal communities and examples of the major periods of California history." Pub. Res. Code § 21001(c). This policy is not restricted to special-status species, but applies to wildlife populations and plant and animal communities. In fact, the CEQA Guidelines Section 21155.1 defines wildlife habitat as "the ecological communities upon which wild animals, birds, plants, fish,

amphibians, and invertebrates depend for their conservation and protection.” The CEQA Checklist Evaluation assigns priority to special-status species to balance information and cost, but it does not exclude the need to evaluate environmental impacts to other species, which, after all, are members of the very communities within which special-status species inter-depend for survival and reproduction.

All wildlife species should be of concern in a CEQA review, but the CEQA prioritizes special-status species. The species I consider to be special-status species are those listed in California’s Special Animals List inclusive of threatened and endangered species under the California and federal Endangered Species Acts, candidates for listing under CESA and FESA, California’s Fully Protected Species, California species of special concern, and California’s Taxa to Watch List (<https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=109406>), continental and region-specific US Fish and Wildlife Service Birds of Conservation Concern (<https://www.fws.gov/sites/default/files/documents/birds-of-conservation-concern-2021.pdf>), and naturally rare species such as raptors protected by California’s Birds of Prey laws, Fish and Game Code Sections 3503, 3503.5, 3505 and 3513 (see <https://wildlife.ca.gov/Conservation/Birds/Raptors>).

SITE VISIT

Myself and Noriko Smallwood, a wildlife biologist with a Master’s Degree from California State University Los Angeles, visited the site of the proposed project for 3.58 hours of diurnal survey from 15:50 to 19:25 and 1.57 hours of nocturnal survey from 19:36 to 21:10 on 21 April 2025. We surveyed at the northeast corner, using binoculars during daylight, and at night we used Sonobat to identify species of bats detected by Petterson M500 bat detector placed at 5 feet and 30 feet above ground. We recorded all species of vertebrate wildlife we detected, including those whose members flew over the site or were seen nearby, off the site. Animals of uncertain species identity were either omitted or, if possible, recorded to the Genus or higher taxonomic level.

Conditions were sunny with no wind and temperatures of 67-56° F. The site is a derelict drive-in theater covered by ruderal grassland with copses of willows and coyote bush (*Baccharis vanessae*), next to a channelized reach of San Jose Creek, which is lined by willows.

We saw western gull and California brown pelican (Photos 1 and 2), spotted sandpiper and double-crested cormorant (Photos 3 and 4), red-tailed hawk and white-tailed kite (Photos 5 and 6), Anna’s hummingbird and belted kingfisher (Photos 7 and 8), mallard (Photos 9 and 10), great egret and great blue heron (Photos 11 and 12), barn swallow (Photo 13), mourning dove and western bluebird (Photos 14 and 15), bushtit (Photo 16), American crow (Photos 17 and 18), California towhee (Photo 19), Cassin’s kingbird and black phoebe (Photos 20 and 21), northern mockingbird and song sparrow (Photos 22 and 23), European starling and Mexican free-tailed bat (Photos 24 and 25), Coast Range fence lizard (Photo 26), among the other species listed in Table 1. Noriko and I detected 50 species of vertebrate wildlife at or adjacent to the project site, including 10 species with special status (Table 1).

Noriko Smallwood certifies that the foregoing and following survey results are true and accurately reported.

Table 1. Species of wildlife Noriko and I observed during 3.58 hours of diurnal survey and 1.57 hours of nocturnal survey on 21 April 2025.

Common name	Species name	Status ¹	Notes
California treefrog	<i>Pseudacris cadaverina</i>		In San Jose Creek
Pacific chorus frog (Baja California treefrog)	<i>Pseudacris regilla</i> (<i>Pseudacris hypochondriaca hypochondriaca</i>)		In San Jose Creek
Coast Ranch fence lizard	<i>Sceloporus occidentalis bocurtii</i>		Males chased females
Mallard	<i>Anas platyrhynchos</i>		In San Jose Creek and flew over
Rock pigeon	<i>Columba livia</i>	Non-native	
Band-tailed pigeon	<i>Patagioenas fasciata</i>		
Mourning dove	<i>Zenaida macroura</i>		Occurred as pairs
Anna's hummingbird	<i>Calypte anna</i>		Territorial defense
Black-necked stilt	<i>Himantopus mexicanus</i>		In San Jose Creek
Killdeer	<i>Charadrius vociferus</i>		
Spotted sandpiper	<i>Actitis macularius</i>		In San Jose Creek
Short-billed gull	<i>Larus brachyrhynchus</i>		Circled over
Ring-billed gull	<i>Larus delawarensis</i>		Circled over
Western gull	<i>Larus occidentalis</i>	BCC	
California gull	<i>Larus californicus</i>	BCC, WL	
Double-crested cormorant	<i>Nannopterum auritum</i>	WL	In San Jose Creek, one carried sticks
California brown pelican	<i>Pelecanus occidentalis californicus</i>		Many, circled over
Great blue heron	<i>Ardea herodias</i>		Flew over
Great egret	<i>Ardea alba</i>		Flew over
Turkey vulture	<i>Cathartes aura</i>	BOP	Flew over
White-tailed kite	<i>Elanus leucurus</i>	CFP, BOP	Flew over
Cooper's hawk	<i>Accipiter cooperii</i>	WL, BOP	Flew over
Red-tailed hawk	<i>Buteo jamaicensis</i>	BOP	Perched, flew over
Belted kingfisher	<i>Ceryle alcyon</i>		In San Jose Creek
Cassin's kingbird	<i>Tyrannus vociferans</i>		Foraged
Black phoebe	<i>Sayornis nigricans</i>		Foraged
Say's phoebe	<i>Sayornis saya</i>		Perched on nest box
California scrub-jay	<i>Aphelocoma californica</i>		
American crow	<i>Corvus brachyrhynchos</i>		Many
Barn swallow	<i>Hirundo rustica</i>		Foraged over site
Cliff swallow	<i>Petrochelidon pyrrhonota</i>		Foraged over site
Bushtit	<i>Psaltiriparus minimus</i>		Just off site, foraged
Blue-gray gnatcatcher	<i>Polioptila caerulea</i>		Just off site
Northern mockingbird	<i>Mimus polyglottos</i>		
European starling	<i>Sturnus vulgaris</i>	Non-native	Nesting just off site

Common name	Species name	Status ¹	Notes
Western bluebird	<i>Sialia mexicana</i>		
House finch	<i>Haemorphous mexicanus</i>		
Lesser goldfinch	<i>Spinus psaltria</i>		
Song sparrow	<i>Melospiza melodia</i>		
California towhee	<i>Melozone crissalis</i>		
Brown-headed cowbird	<i>Molothrus ater</i>		Flew over
Great-tailed grackle	<i>Quiscalus mexicanus</i>		Just off site
Yuma myotis	<i>Myotis yumanensis</i>	WBWG:LM	
California myotis	<i>Myotis californicus</i>	WBWG:L	
Silver-haired bat	<i>Lasionycteris noctivagans</i>	WBWG:M	
Spotted bat	<i>Euderma maculatum</i>	SSC, WBWG:H	
Mexican free-tailed bat	<i>Tadarida brasiliensis</i>	WBWG:L	
Raccoon	<i>Procyon lotor</i>		Tracks in San Jose Creek
California vole	<i>Microtus californicus</i>		Burrows
Botta's pocket gopher	<i>Thomomys bottae</i>		Burrows

¹ Listed on Special Animals List as SSC = California Species of Special Concern or WL = Taxa to Watch List (<https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=109406>); listed by U.S. Fish and Wildlife Service as BCC = Bird of Conservation Concern (<https://www.fws.gov/sites/default/files/documents/birds-of-conservation-concern-2021.pdf>); protected as BOP = Birds of Prey (California Fish and Game Code 3503.5).

The species of wildlife we detected at the project site comprised only a sampling of the species that were present during our survey. To demonstrate this, I fit a nonlinear regression model to our cumulative number of vertebrate species detected with time into our survey to predict the number of species that we would have detected with a longer survey or perhaps with additional biologists available to assist. The model is a logistic growth model which reaches an asymptote that corresponds with the maximum number of vertebrate wildlife species that could have been detected during the survey. In this case, the model fit to our survey data predicts many more species of vertebrate wildlife were available to be detected during our survey (Figure 1).

We do not know which species we missed, but the pattern in our data indicates a greater than average use of the project site compared to six evening surveys at other sites we have completed in the region (Figure 1). Importantly, however, the species we did and did not detect on 21 April composed only a fraction of the species that would occur at the project site over the period of a year or longer. This is because it is easy to miss species that are cryptic in nature, or occur only seasonally as they migrate, or whose members visit the site only periodically while patrolling large home ranges, such as did the white-tailed kite we detected.

Figure 1. Actual and predicted relationships between the numbers of vertebrate wildlife species detected and the elapsed survey time based on our visual-scan survey on 21 April 2025.

At least a year's worth of surveys would be needed to more accurately report the number of vertebrate species that occur at the project site, but I only have our one survey and that of the project applicant's consulting biologist. However, by use of an analytical bridge, a modeling effort applied to a large, robust data set from a research site can predict the number of vertebrate wildlife species that likely make use of the site over the longer term. As part of my research, I completed a much larger survey effort across 167 km² of annual grasslands of the Altamont Pass Wind Resource Area, where from 2015 through 2019 I performed 721 1-hour visual-scan surveys, or 721 hours of surveys, at 46 stations. I used binoculars and otherwise the methods were the same as the methods we and other consulting biologists use for surveys at proposed project sites. At each of the 46 survey stations, I tallied new species detected with each sequential survey at that station, and then related the cumulative species detected to the hours (number of surveys, as each survey lasted 1 hour) used to accumulate my counts of species detected. I used combined quadratic and simplex methods of estimation in Statistica to estimate least-squares, best-fit nonlinear models of the number of cumulative species detected regressed on hours of survey (number of surveys) at the station: $\hat{R} = \frac{1}{1/a + b \times (\text{Hours})^c}$, where $\hat{R}$ represented cumulative species richness detected. The coefficients of determination, r^2 , of the models ranged 0.88 to 1.00, with a mean of 0.97 (95% CI: 0.96, 0.98); or in other words, the models were excellent fits to the data.

I projected the predictions of each model to thousands of hours to find predicted asymptotes of wildlife species richness. The mean model-predicted asymptote of species richness was 57 after 11,857 hours of visual-scan surveys among the 46 stations of my research site. I also averaged model predictions of species richness at each incremental increase of number of surveys, i.e., number of hours (Figure 2). On average I would have detected 14.2 species over my first 3.58 hours of surveys at my research site in the Altamont Pass (3.58 hours to match the 3.58 hours we surveyed at the project site), which composed 24.9% of the predicted total number of species I would detect with a much larger survey effort at the research site. Given the example illustrated in Figure 2, the 45 species we detected after our 3.58 hours of diurnal survey at the project site likely represented 24.9% of the species to be detected after many more visual-scan surveys over another year or longer. With many more repeat surveys through the year, we would likely detect $45 / 0.249 = 181$ species of vertebrate wildlife at the site. Assuming our ratio of special-status to non-special-status species was to hold through the detections of all 181 predicted diurnally-active species, then continued surveys would eventually detect 28 special-status species of diurnally-active vertebrate wildlife.

Figure 2. Mean (95% CI) predicted wildlife species richness, $\hat{R}$, as a nonlinear function of hour-long survey increments across 46 visual-scan survey stations across the Altamont Pass Wind Resource Area, Alameda and Contra Costa Counties, 2015–2019. Note that the location of the study is largely irrelevant to the utility of the graph to the interpretation of survey outcomes at the project site. It is the pattern in the data that is relevant, because the pattern is typical of the pattern seen elsewhere.

Because my prediction of 181 species of vertebrate wildlife, including 28 special-status species of vertebrate wildlife, is derived from daytime visual-scan surveys, and would detect few nocturnal mammals such as bats, the true number of species composing the wildlife community of the site must be larger. In fact, we know it is larger, because we performed a nocturnal survey as well. In little more than 1.5 hours of acoustic detection survey for bats, we detected five species of bats in more than 220 foraging passes. At 140 foraging passes per hour, our survey result was the busiest we have ever detected during a bat survey, the second busiest having been another project site in Goleta. Our rate of

foraging passes at the project site was 4.5 times greater than the rate we recorded at the other Goleta site.

The pattern in the rate of bat species detections suggests that we would have detected nine species of bats within five hours had we continued to survey that long (Figure 3). (We did not commit to five hours because we had another survey to complete at a distant location in the early morning.) The bat species we managed to detect included Mexican free-tailed bat, California myotis, Yuma myotis, silver-haired bat, and spotted bat, whose sonograms are their signatures (Figure 4). The spotted bat is one of the rarest species of bat on the West Coast, and it is a California Species of Special Concern. We detected it twice.

Figure 3. Actual and model-predicted relationship between the number of bat species detected and the elapsed survey time based on our acoustic detection survey on 21 April 2025.

Figure 4. SonoBat's sonograms of Mexican free-tailed bat, California myotis, Yuma myotis, silver-haired bat, and spotted bat, respectively, at the project site on 21 April 2025.

Our reconnaissance survey should serve only as a starting point toward characterization of the project site's wildlife community, but it certainly cannot alone inform of the inventory of species that use the site. More surveys are needed than our one survey to inventory the project site's wildlife community. Nevertheless, the large number of

species I predict at the project site is indicative of a relatively species-rich wildlife community that warrants a serious survey effort.

EXISTING ENVIRONMENTAL SETTING

The first step in analysis of potential project impacts to biological resources is to accurately characterize the existing environmental setting, including the wildlife community and any key ecological relationships and known and ongoing threats to special-status species. A reasonably accurate characterization of the setting can provide the baseline against which to analyze potential project impacts. For these reasons, characterization of the environmental setting is one of the CEQA's essential analytical steps. Methods to achieve this first step typically include (1) surveys of the site for biological resources, and (2) reviews of literature, databases and local experts for documented occurrences of special-status species. In the case of the proposed project, these required steps remain incomplete and misleading.

The characterization of the environmental setting is too old to be accurate anymore. The conclusions of Tierney (2017) are based on surveys that were completed eight years ago. Tierney's (2017: Figure 5, especially #3) photo depictions of the site are outdated, as the site is now largely covered by ruderal vegetation rather than bare pavement (Photo 27).

Photo 27. Google Earth image of project site in February 2025, showing more vegetation than asphalt surface.

Tierney (2017:13) reports that “San Jose Creek, adjacent to this site, is located within critical habitat for both the Southern California steelhead and tidewater goby, both listed as Endangered...” under the federal Endangered Species Act. This reach of San Jose Creek is visible in Photo 27. Its riparian vegetation is dense and lush (Photos 28 and 29), contrary to Tierney’s (2017:13) characterization of it: “The lack of riparian vegetation along this stretch diminishes habitat value.” I am not alleging that Tierney mischaracterized the riparian vegetation at the time, but rather that the vegetation has grown amply over the eight years since Tierney’s (2017) report, and that existing conditions are no longer represented accurately in Tierney (2017). Watershed Environmental (2023) prepared a “peer-review” of Tierney (2017), but there is no evidence in Watershed Environmental that a site visit was performed in support of the review. Watershed Environmental (2023) appears to assume, incorrectly, that nothing changed since Tierney’s (2017) reporting.

Tierney (2017:9) also writes, “In general, the project site is not expected to support a very diverse wildlife population due to its highly degraded condition and the extent of developed areas that surround the property (Semonsen, 2017).” The FEIR (p. 4.3-12) writes something very similar, “In general, the project site is not expected to support a very diverse wildlife population since it is paved and lacks native vegetation.” However, vegetation is degrading the pavement and once again covering the site. And again, I have no access to Semonsen (2017), so I have no idea what basis Semonsen provides to Tierney’s conclusion. Tierney’s conclusion appears speculative, and it is inaccurate. As I commented earlier, Noriko and I detected species of wildlife at a rate that exceeded the upper bound of my 95% confidence interval estimated from surveys at other sites in the region (Figure 1). The region to which I refer extends from Goleta to Burbank. The rate of our accumulation of new species detections in Figure 1 was second only to another site in Goleta. In our experience with hundreds of surveys at proposed project sites across California, Goleta is endowed with one of the highest degrees of wildlife species richness we have seen anywhere. The project site should be expected to support a diverse wildlife community, and it does.

Tierney (2017) cites no evidence that the condition issues of the site – the issues that existed in 2017 – should be expected to support a degraded wildlife community, or a wildlife community that is unworthy of conservation. Unmaintained asphalt surfaces are short-lived, giving way to vegetation and fossorial animals that push their way through cracks and burrows. I have even observed plants and wildlife make their ways through multi-million dollar “bio-barriers” and extra-thick asphalt pads intended to prevent passage by plants and animals (Smallwood et al. 1998). And as habitat fragmentation proceeds, the last remaining patches of open space can be more intensely sought as habitat by wildlife, mitigating to some degree the adverse effects of habitat fragmentation and increasing the number of species occurring on them. In the case of the project site, where else would wildlife be expected to occur if not on or next to the site?

Photos 28 and 29.
Riparian vegetation on the south and north shores of San Jose Creek immediately adjacent to the project site on 21 April 2025. Note the belted kingfisher centered in the photo of riparian vegetation on the south shore, for scale.

Furthermore, Tierney (2017:13, 16) reports, “Shorebirds known from the Goleta Slough, including great egret (potential nesting), great blue heron (nesting), double-crested cormorant (roosting), rock dove, starling, Caspian tern, brown pelican, snowy egret, mallard, and violet-green swallow, may visit the culverted creek, although they are not expected to nest anywhere near the project site (Semonsen, 2017, SBFC, 2008).” The cited source of SBFC (2008) is missing from the literature cited section of Tierney (2017), and the cited source of Semonsen (2017) is not attached to Tierney (2017) nor is it included with the FEIR. The cited sources are therefore of unknown reliability. We also note that the violet-green swallow is not a shorebird, so it does not belong on Tierney’s list of shorebirds. More importantly, refuting Tierney’s overall conclusion are our observations during our survey, during which we observed great egrets, great blue herons, and pairs of mallards on and adjacent to the site in the middle of breeding season. We also saw a double-crested cormorant collect nest material from the reach of San Jose Creek adjacent to the project site (Photo 30). Even if this double-crested cormorant is not nesting on the site or along this reach of San Jose Creek, this reach of the Creek is of obvious importance to its breeding attempt by supplying it with nest material.

Photo 30. *Double-crested cormorant leaving San Jose Creek with nest material, 21 April 2025. Even if this double-crested cormorant is not nesting in this reach of San Jose Creek, this reach of the Creek is important to its nesting attempt by provisioning nest material.*

The FEIR (p. 4.3-12) speculates that due to its proximity to the Airport, “All animal species present are likely adapted to loud and frequent noise (Tierney Consulting 2018).” This speculation appears to have been based on Tierney’s reporting of anecdotal observations that most birds did not react to the noise of passing airplanes. However, the effects of noise on wildlife are not always observable as behavioral observations, but also in terms of activity budgets, nest success and productivity; in other words, the effects can be complex and are discernable through careful experimental study. Short of the types of studies needed to measure the effects of noise, the FEIR’s conclusion is merely speculative and its implications are questionable.

Also on p. 4.3-12, the FEIR claims that “for larger birds, the barrenness of the project site dramatically reduces the diversity and abundance of the native rodent prey base...” However, the site is no longer barren, as it is mostly covered by vegetation. Moreover, the FEIR cites no evidence that barrenness bears on the diversity and abundance of native rodent prey base to large birds. In fact, deserts, which are more barren than are grasslands or shrublands, are known to support some of the largest and most diverse rodent populations on Earth. And barrenness can enhance the ability of large birds to find and capture rodents. The FEIR’s claim is based on outdated conditions and lacks foundation in evidence. And in fact, we observed a white-tailed kite, a Cooper’s hawk, and two red-tailed hawks visit the site, as well as great egrets and a great blue heron.

Environmental Setting informed by Field Surveys

To the CEQA’s primary objective to disclose potential environmental impacts of a proposed project, the analysis should be informed of which biological species are known to occur at the proposed project site, which special-status species are likely to occur, as well as the limitations of the survey effort directed to the site. Analysts need this information to characterize the environmental setting as a basis for opining on, or predicting, potential project impacts to biological resources.

A wildlife reconnaissance survey was completed by a single biologist on 20 May 2017, sometime between 10:00 and 15:00 hours (Tierney 2017). Based on my experience, the survey was well-performed considering its less-productive start time. The most productive times to start a wildlife survey are early morning or early evening, but most certainly not after mid-morning. To help interpret the survey’s findings, Tierney (2017) should have reported the exact duration of the survey.

The wildlife reconnaissance survey reported by Tierney (2017) yielded 34 species of vertebrate wildlife. In only a few hours of survey at one corner of the project site, but at the same time of year as the Tierney survey, Noriko and I nearly doubled the number of vertebrate species known to the site based on reconnaissance survey from Tierney’s 34 species to our combined 62 species. Our near doubling of the species documented at the site was despite the fact that Tierney enjoyed full access to the site whereas we were confined to the northeast corner of it. Moreover, the wildlife community we sampled was considerably different from the one represented by Tierney’s reported survey.

Applying the Sørensen *Index of Similarity* = $\frac{2c}{a+b}$ (Sørensen 1948), where a is the number of species found by Tierney, b is the number of species found by Noriko and I,

and c is the number of species found by both Tierney and ourselves, the Index of Similarity of the two wildlife communities is only 0.58. For comparison, the mean Index of Similarity among 40 comparisons of surveys I completed over the same time periods and at the same place in Rancho Cordova, California, but on different days over three years 2020-2023, was 0.755 with a high value of 0.90. An Index value of 0.58 is relatively low, likely resulting from a changed environmental setting and the effects of serendipity of survey outcomes when only two surveys are compared.

With only a single wildlife survey completed eight years ago, the FEIR's characterization of the wildlife community is incomplete and outdated. Contributing to the outdatedness of the 2017 survey is the change in status of many of the region's wildlife species. Some of the species with elevated special status since the 2017 survey include Monarch, Crotch's bumble bee, willet, American avocet, California gull, western gull, California thrasher, wrentit, Bullock's oriole, and tricolored blackbird.

Protocol-level detection surveys were not completed for any of the potentially occurring special-status species of wildlife. With ground squirrels reportedly on the project site (Tierney 2017), a detection survey for burrowing owls is warranted. Ground squirrels are important to burrowing owls by constructing the burrows in which burrowing owls breed and find refuge, and by mutual alarm-calling for the presence of predators. As of 10 October 2024, the burrowing owl is a candidate for listing under the California Endangered Species Act.

No survey effort was directed toward bats. Considering our bat survey results, and considering the very high level of bat activity we found at the project site, it is surprising that the City failed to perform a bat survey.

The FEIR's characterization of the plant community is also incomplete, because the Tierney (2017) surveys for plants did not achieve the minimum standards of the CDFW (2018) rare plant survey guidelines. The FEIR cites another plant survey attributed to Rincon (2021) for a nearby project site, but I could not locate the report. I am unable to assess whether Rincon (2021) achieved the minimum standards of CDFW (2018). The City of Goleta has had seven years to implement surveys consistent with the CDFW (2018) guidelines, but has not done so. The FEIR's determinations of absences of rare plants on the project site are therefore not supported.

Environmental Setting informed by Desktop Review

The purpose of literature and database reviews and of consulting with local experts is to inform the field survey, and to augment interpretation of its outcome. Analysts need this information to identify which species are known to have occurred at or near the project site, and to identify which other special-status species could conceivably occur at the site due to geographic range overlap and migration flight paths.

Tierney (2017) did not reportedly review eBird (<https://eBird.org>) or iNaturalist (<https://www.inaturalist.org>) for documented occurrence records at or near the project site, nor were these occurrence data bases relied upon in the FEIR. Instead, Tierney

(2017) and the City (FEIR) queried the California Natural Diversity Data Base (CNDDDB) for documented occurrences of special-status species within one USGS Quadrangle of the project site. By doing so, Tierney (2017) screened out many special-status species from further consideration in the characterization of the wildlife community as part of the existing environmental setting. CNDDDB is not designed to support absence determinations or to screen out species from characterization of a site's wildlife community. As noted by the CNDDDB, *"The CNDDDB is a positive sighting database. It does not predict where something may be found. We map occurrences only where we have documentation that the species was found at the site. There are many areas of the state where no surveys have been conducted and therefore there is nothing on the map. That does not mean that there are no special status species present."* Tierney (2017) and the FEIR misuse the CNDDDB.

The CNDDDB relies entirely on volunteer reporting from biologists who were allowed access to whatever properties they report from. Many properties have never been surveyed by biologists. Many properties have been surveyed, but the survey outcomes never reported to the CNDDDB. Many properties have been surveyed multiple times, but not all survey outcomes reported to the CNDDDB. Furthermore, the CNDDDB is interested only in the findings of special-status species, which means that species more recently assigned special status will have been reported many fewer times to CNDDDB than were species assigned special status since the inception of the CNDDDB. The lack of many CNDDDB records for species recently assigned special status had nothing to do with whether the species' geographic ranges overlapped the project site, but rather more to do with the brief time for records to have accumulated since the species were assigned special status. And because negative findings are not reported to the CNDDDB, the CNDDDB cannot provide the basis for estimating occurrence likelihoods, either.

Tierney (2017) recorded only whether each special-status species included in its analysis was observed, expected, or not expected to occur. For some of the species Tierney determined not to be expected – those listed in its Table 2 – no explanation was given for the determinations. Tierney's determinations of "not expected" were later proven inaccurate by the results of our survey, including for white-tailed kite, Cooper's hawk, Cassin's kingbird, and blue-gray gnatcatcher. We detected all four of these species that Tierney (2017) determined were not expected to occur.

The FEIR relies on likelihoods of occurrence categorized as low, moderate, high, and present, but these categories are flawed. A major factor contributing to the FEIR's categorizations of occurrence potential is habitat suitability. However, because there is no such thing as unsuitable habitat, the term *habitat suitability* is meaningless (Krausman 2016). Habitat is defined as the portion of the environment that is used by members of a species for survival and reproduction (Hall et al. 1997, Morrison et al. 1998), whereas a habitat type refers to a vegetation complex. A species' habitat is not just a vegetation complex (Hall et al. 1997, Krausman 2016), and it certainly vary in suitability as the FEIR portrays – it is either habitat or it is not habitat to each species under consideration. The FEIR's categorization of occurrence likelihoods also relies on the term *habitat quality*, but this term goes to the productivity of a species, and is

typically measured by breeding success or fecundity, neither of which metric has been measured for any of the species at issue.

Another flaw with the FEIR's desktop review is its lumping of special-status species as if their habitats and occurrence likelihoods are the same. By definition, species and their habitats are unique, so lumping them reveals a fundamental lack of understanding of the habitat concept and how to assess habitat. Examples of lumping include the riparian birds consisting of yellow-breasted chat and yellow warbler, riparian birds consisting of least Bell's vireo and southwestern willow flycatcher, special-status raptors consisting of white-tailed kite, Cooper's hawk and burrowing owl, special-status bats consisting of pallid bat, Townsend's big-eared bat, western red bat, and western big-eared bat. Again, the habitat of yellow warbler is not the same as yellow-breasted chat, nor are their occurrence likelihoods or probabilities of detection during a reconnaissance survey. The same can be said of the species in the other groupings; burrowing owl habitat is not the same as Cooper's hawk habitat, and the habitat of pallid bat is not the same as that of western red bat.

The FEIR concludes there is no nesting habitat on the study area for Cooper's hawk, white-tailed kite and burrowing owl. However, the FEIR provides no evidence in support of this conclusion. Based on my experience with these species, the FEIR's conclusion is unfounded and likely inaccurate. We saw two of these species on the site, and the presence of ground squirrels increases the likelihood that burrowing owls nest on site. It would help to actually survey the site for these species, rather than speculating that the site is unsuitable for breeding by any of them.

In support of its low occurrence likelihood, the FEIR claims that loggerhead shrikes do not reproduce on the south coast. The FEIR cites Lehman (2022), but the citation is not supported by a reference in the list of references cited. Without being able to locate the referenced source of this claim, I cannot assess the veracity of the claim, but I suspect it is not true. Loggerhead shrikes are known to nest on the Catalina Islands, and I know they nest north of the site (Smallwood and Smallwood 2021), so why would they not nest in the Goleta area?

Of the likelihood of occurrence of Crotch's bumble bee, the FEIR states "Bumble bees were not observed during the field surveys." However, this statement is misleading because no detection surveys were performed for Crotch's bumble bee, and it is only ever a low chance of detecting this species during a reconnaissance survey.

The FEIR says of Monarch that only transients are likely to occur on the project site. By transients, I assume the FEIR means migrants, as there is no such animal as a transient in wildlife ecology. The occurrence of migrants would be just as important as Monarchs that are roosting, as Monarchs only manage to arrive to roost sites by successfully migrating to and from those sites.

Repeatedly in Table 4.3-3, the FEIR downplays the occurrence likelihoods of special-status species by pointing out that no CNDDB records were found within 5 miles of the project site. However, as I commented earlier, and as warned by the CNDDB itself, the

lack of occurrence records likely only means that records of the species have yet to be submitted to the CNDDDB. Absence of records does not mean the species are absent.

In my assessment based on a database review and a site visit, 136 special-status species of wildlife are known to occur near enough to the site to warrant analysis of occurrence potential (Table 2). Of these 136 species, 13 (10%) were recorded on or just off the project site, and another 80 (59%) species have been documented within 1.5 miles of the site ('Very close'), another 12 (9%) within 1.5 and 4 miles ('Nearby'), and another 23 (17%) within 4 to 30 miles ('In region'). Over three-fourths (78%) of the species in Table 2 have been reportedly seen within 4 miles of the project site. The site therefore supports multiple special-status species of wildlife and carries the potential for supporting many more special-status species of wildlife based on the proximities of recorded occurrences. The site is far richer in special-status species than the City of Goleta would have the public believe.

Of the 136 special-status species I list in Table 2, Tierney (2017) analyzed the occurrence likelihoods of only 28 of them, and all 28 were determined by Tierney to be "Not expected" to occur. Only one of these 28 "Not expected" determinations (Least Bell's vireo) comported with the FEIR's determinations, but otherwise the FEIR does not analyze the occurrence likelihoods of 21 (75%) of them, and the FEIR determines the occurrence likelihoods of six to be low or very low, the latter category having not been described in the FEIR. During our brief survey at the site, we detected three of the special-status species Tierney (2017) determined to be not expected to occur. We found occurrence records of another fourteen special-status species within 1.5 miles of the project site, and records of another three species between 1.5 and 4 miles of the site.

Of the 136 special-status species I list in Table 2, the FEIR analyzes the occurrence likelihoods of only 22 of them, of which two are assigned no occurrence potential, 19 are assigned low or very low potential, and only one is assigned moderate potential. Fifteen (68%) of the special-status species analyzed in the FEIR were not analyzed by Tierney (2017). We detected two of the special-status species the FEIR determines to have low potential of occurrence. Of the other 17 special-status species the FEIR determines to have low occurrence potential, we found occurrence records of 10 (59%) within 1.5 miles of the site, and of another between 1.5 and 4 miles of the site. Of the two species the FEIR determines to have no potential, we found occurrence records of one species within 4 miles of the site.

Table 2. Occurrence likelihoods of special-status bird species at or near the proposed project site, according to eBird/iNaturalist records (<https://eBird.org>, <https://www.inaturalist.org>) and on-site survey findings, where ‘Very close’ indicates within 1.5 miles of the site, “nearby” indicates within 1.5 and 4 miles, and “in region” indicates within 4 and 30 miles, and ‘in range’ means the species’ geographic range overlaps the site. Entries in bold font identify species detected by ourselves.

Common name	Species name	Status ¹	Occurrence potential

¹ Listed on Special Animals List (<https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=109406>) as FT or FE = federal threatened or endangered, FC = federal candidate for listing, CCT or CCE = Candidate California threatened or endangered, CFP = California Fully Protected (California Fish and Game Code 3511), SSC = California Species of Special Concern, CT or CE = California threatened or endangered, SSC = California Species of Special Concern (not threatened with extinction, but rare, very restricted in range, declining throughout range, peripheral portion of species' range, associated with habitat that is declining in extent, and SSC1, SSC2 and SSC3 = California Bird Species of Special Concern priorities 1, 2 and 3, respectively, WL = Taxa to Watch List, and WBWG = Western Bat Working Group with priority rankings, of low (L), moderate (M), and high (H); listed by U.S. Fish and Wildlife Service (<https://www.fws.gov/sites/default/files/documents/birds-of-conservation-concern-2021.pdf>) as BCC = Bird of Conservation Concern; as protected as BOP = Birds of Prey (California Fish and Game Code 3503.5, see <https://wildlife.ca.gov/Conservation/Birds/Raptors>)

Based on the above comparisons, both Tierney (2017) and the FEIR are grossly incomplete in their habitat assessments, and furthermore they are inconsistent and inaccurate in their determinations. The assessments are incomplete because they misused the CNDDDB to screen out species from their analyses. They are inconsistent and inaccurate because they misapply the habitat concept as well as species' detection probabilities. Take white-tailed kite, for example. eBird occurrence records include white-tailed kites within 300 m of the project site, even prior to Tierney's (2017) analysis. The proximities of occurrence records serve as a useful predictor of the likelihood of detection of a species on a given site (Figure 5). As shown in this case for white-tailed kite, occurrence records that are more distant from a site decrease the likelihood of detection at a given level of survey effort, but they do not preclude detections altogether (consistent with the tenet that occurrence records should not lead to determinations of absence). More distant records more accurately inform of the need for greater survey effort to detect the species on the site. In the example of the white-tailed kite, the addition of proximity domains informs us that to achieve a 10% likelihood of detection, even a brief survey should be all that is needed if the nearest occurrence record was on site or adjacent to the site, but to achieve this same 10% likelihood of detection, four hours would be needed if the nearest record was within 1.5 miles of the site, and 10 hours would be needed if the nearest record was between 1.4 and 40 miles of the site. We surveyed for 3.58 hours, which gave us a <10% chance of seeing a white-tailed kite, which we were fortunate to observe. Tierney's (2017) survey would have stood about a one in 10 chance of detecting white-tailed kite.

To summarize, occurrence records in the CNDDDB or other positive-sighting databases are unsuitable for determining absence, but they are suitable for predicting survey detection likelihoods and for determining the survey efforts needed to provide a reasonable likelihood of detection of each species. I suggest the City of Goleta needs to change the way it interprets reconnaissance survey outcomes and queries of the CNDDDB.

BIOLOGICAL IMPACTS ASSESSMENT

Accurate characterization of the existing environmental setting is an essential foundation for analysis of potential project impacts, but the FEIR mischaracterizes the existing environmental setting as its foundation for impacts analysis related to plants and wildlife. An impacts analysis should consider whether and how the proposed project would affect members of each potentially occurring special-status species. In the following, I analyze several types of impacts likely to result from the project, none of which is adequately analyzed in the FEIR.

Figure 5. The probability of detection of white-tailed kite at a given site within its geographic range in California is a function of both survey duration and proximity of occurrence records in eBird. This graph was generated from our compilation of eBird occurrence records on or around project sites we surveyed throughout California from 2019 through 2024.

REDUCED PRODUCTIVE CAPACITY FROM HABITAT LOSS

The FEIR does not attempt to estimate the numerical or productive capacities of the site for nesting birds. The site is proven to serve as habitat to at least 62 species of wildlife which we and Tierney (2017) observed on the site, but the number of avian nest sites remains unknown. Because our surveys were only reconnaissance surveys, and therefore unsuitable for detecting all bird nests on the site, estimating total nest density of birds is possible only via scientific inference based on total nest density estimates made elsewhere. Fortunately, we have performed such surveys at other sites to estimate total nest density.

As part of an ongoing study, Noriko Smallwood estimated 3.8 nests/acre on a 3.16-acre site of grassland in Murrieta, 0.62 nests/acre on a 4.83-acre site, and 0.93 nests/acre on grassland of the San Joaquin Wildlife Area. On a 2.95-acre grassland site east of Davis, California, I estimated 5.08 nest sites/acre. The average of the above is 2.61 nests/acre. This density applied to the 6.75 acres of the proposed development portion of the

project site would predict 17.6 nest sites per year. Assuming 1.39 broods per nest site based on a review of 322 North American bird species, which averaged 1.39 broods per year, then I estimate an average 24.5 nest attempts per year at the project site. Assuming Young's (1948) study site typifies bird productivity of 2.9 fledged birds per nest attempt, then I predict 71 fledglings/year at the project site.

The loss of 17.6 nest sites and 24.5 nest attempts and 71 fledglings per year would qualify as significant impacts that have not been analyzed in the FEIR. But the impacts would not end with the immediate loss of nest sites. Assuming an average bird generation time of 4 years, the lost capacity of both breeders and annual fledgling production can be estimated from an equation in Smallwood (2022): $\{(nests/year \times chicks/nest \times number\ of\ years) + (2\ adults/nest \times nests/year) \times (number\ of\ years \div years/generation)\} \div (number\ of\ years) = 80\ birds\ per\ year\ denied\ to\ California.$

The loss of 80 birds per year would be a loss of considerable productive capacity that is currently provided by the project site. Most if not all these birds are protected by the federal Migratory Bird Treaty Act and by California's Migratory Bird Protection Act, both of which most strongly protect breeding migratory birds. Therefore, the EIR needs to be revised to appropriately analyze project impacts to birds in the form of lost productive capacity caused by habitat loss.

INTERFERENCE WITH WILDLIFE MOVEMENT

One of CEQA's principal concerns regarding potential project impacts is whether a proposed project would interfere with wildlife movement in the region. Unfortunately, the FEIR provides no serious analysis of the potential for the project to interfere with wildlife movement in the region. The FEIR discusses corridors and the likely poor functionality of existing wildlife movement corridors around the project site. However, the FEIR's analysis implies that only disruption of the function of a wildlife corridor can interfere with wildlife movement in the region. This implication, however, represents a false CEQA standard, and is therefore inappropriate to the analysis. The primary phrase of the CEQA standard goes to wildlife movement regardless of whether the movement is channeled by a corridor. A site such as the proposed project site is critically important for wildlife movement because it composes an increasingly diminishing area of open space within a growing expanse of anthropogenic uses, forcing more species of volant wildlife to use the site for stopover and staging during migration, dispersal, and home range patrol (Warnock 2010, Taylor et al. 2011, Runge et al. 2014). The project would cut wildlife off from stopover and staging opportunities, forcing volant wildlife to travel even farther between remaining stopover sites.

I will add that there has been no program of observation to characterize how wildlife use the site for movement in the region. No study was designed and implemented to document movement patterns, or whether wildlife are staging or stopping over on the site. During our survey, we noted multiple volant species of wildlife moving to and from the project site, including California brown pelicans, great egrets, great blue heron, California gull, western gull, short-billed gull, ring-billed gull, white-tailed kite, Cooper's hawk, red-tailed hawk and many others. Large flocks of American crows stopped over,

as did barn swallows and cliff swallows and others. The project site is obviously important to wildlife movement in the region, and its loss to a warehouse would, in my opinion, result in significant unmitigated impacts to wildlife.

TRAFFIC IMPACTS TO WILDLIFE

The FEIR neglects to address one of the project's most obvious, substantial impacts to wildlife, and that is wildlife mortality and injuries caused by project-generated traffic. Project-generated traffic would endanger wildlife that must, for various reasons, cross roads used by the project's traffic (Photos 31–34), including along roads far from the project footprint but which would nevertheless be traversed by automobiles head to or from the project's building. Vehicle collisions have accounted for the deaths of many thousands of amphibian, reptile, mammal, bird, and arthropod fauna, and the impacts have often been found to be significant at the population level (Forman et al. 2003). Across North America traffic impacts have taken devastating tolls on wildlife (Forman et al. 2003). In Canada, 3,562 birds were estimated killed per 100 km of road per year (Bishop and Brogan 2013), and the US estimate of avian mortality on roads is 2,200 to 8,405 deaths per 100 km per year, or 89 million to 340 million total per year (Loss et al. 2014). Local impacts can be more intense than nationally.

Photo 31. *A white-tailed antelope squirrel runs across the road just in the Coachella Valley, 26 May 2022. Such road crossings are usually successful, but too often prove fatal to the animal.*

Photo 32. *A coyote uses the crosswalk to cross a road on 2 February 2023. Not all drivers stop, nor do all animals use the crosswalk. Too often, animals are injured or killed when they attempt to cross roads.*

Photos 33 and 34. *Raccoon killed on Road 31 just east of Highway 505 in Solano County (left; photo taken on 10 November 2018), and mourning dove killed by vehicle on a California road (right; photo by Noriko Smallwood, 21 June 2020.)*

The nearest study of traffic-caused wildlife mortality was performed along a 2.5-mile stretch of Vasco Road in Contra Costa County, California. Fatality searches in this study found 1,275 carcasses of 49 species of mammals, birds, amphibians and reptiles over 15 months of searches (Mendelsohn et al. 2009). This fatality number needs to be adjusted for the proportion of fatalities that were not found due to scavenger removal and searcher error. This adjustment is typically made by placing carcasses for searchers to find (or not find) during their routine periodic fatality searches. This step was not taken at Vasco Road (Mendelsohn et al. 2009), but it was taken as part of another study next to Vasco Road (Brown et al. 2016). Brown et al.'s (2016) adjustment factors for carcass persistence resembled those of Santos et al. (2011). Also applying searcher detection rates from Brown et al. (2016), the adjusted total number of fatalities was estimated at 9,462 animals killed by traffic on the road. This fatality number projected over 1.25 years and 2.5 miles of road translates to 3,028 wild animals per mile per year. In terms comparable to the national estimates, the estimates from the Mendelsohn et al. (2009) study would translate to 188,191 animals killed per 100 km of road per year, or 22 times that of Loss et al.'s (2014) upper bound estimate and 53 times the Canadian estimate. An analysis is needed of whether increased traffic generated by the project site would similarly result in local impacts on wildlife.

For wildlife vulnerable to front-end collisions and crushing under tires, road mortality can be predicted from the study of Mendelsohn et al. (2009) as a basis, although it would be helpful to have the availability of more studies like that of Mendelsohn et al. (2009) at additional locations. My analysis of the Mendelsohn et al. (2009) data resulted in an estimated 3,028 animals killed per mile along a county road in Contra Costa County. The estimated numbers of fatalities were 1.75% birds, 26.4% mammals (many mice and pocket mice, but also ground squirrels, desert cottontails, striped skunks, American badgers, raccoons, and others), 67.4% amphibians (large numbers of California tiger salamanders and California red-legged frogs, but also Sierran treefrogs,

western toads, arboreal salamanders, slender salamanders and others), and 4.4% reptiles (many western fence lizards, but also skinks, alligator lizards, and snakes of various species). VMT is useful for predicting wildlife mortality because I was able to quantify miles traveled along the studied reach of Vasco Road during the time period of the Mendelsohn et al. (2009), hence enabling a rate of fatalities per VMT that can be projected to other sites, assuming similar collision fatality rates.

Predicting project-generated traffic impacts to wildlife

The FEIR does not report a prediction of annual VMT that would be generated by the project. However, I have kept track of predicted annual VMT at other proposed warehouse projects, from which I can generate a mean annual VMT per square foot of floor space. Based on 33 other warehouse projects, the mean annual VMT/sf was 21.54. Applying this mean to the 70,594 sf of the proposed warehouse would predict 1,520,595 annual VMT.

During the Mendelsohn et al. (2009) study, 19,500 cars traveled Vasco Road daily, so the vehicle miles that contributed to my estimate of non-volant fatalities was 19,500 cars and trucks $\times$ 2.5 miles $\times$ 365 days/year $\times$ 1.25 years = 22,242,187.5 vehicle miles per 9,462 wildlife fatalities, or 2,351 vehicle miles per fatality. This rate divided into the predicted annual VMT would predict 647 vertebrate wildlife fatalities per year due to project-generated traffic.

Based on my analysis, the project-generated traffic would cause substantial, significant impacts to wildlife. The FEIR does not address this potential impact, let alone propose to mitigate it. Mitigation measures to improve wildlife safety along roads are available and are feasible, and they need exploration for their suitability with the proposed project. Given the predicted level of project-generated traffic-caused mortality, and the lack of any proposed mitigation, it is my opinion that the proposed project would result in potentially significant adverse biological impacts. The FEIR should be revised to appropriately analyze the impact of wildlife collision mortality resulting from project-generated traffic.

CUMULATIVE IMPACTS

The cumulative impacts analysis is fundamentally flawed. According to the FEIR (p. 4.3-68), “The development of adjacent projects when considered with the redevelopment of the development area, would not be cumulatively significant with adherence to project-specific mitigation measures and permits.” This analysis is conclusory, and its characterization of cumulative effects fails to meet the CEQA’s definition of cumulative effects. A cumulative impacts analysis needs to be completed.

Noriko and I measured the impacts – inclusive of cumulative impacts – of wildlife habitat loss caused by mitigated development projects. We revisited 80 sites of proposed projects that we had originally surveyed in support of comments on CEQA review documents (Smallwood and Smallwood 2023). We revisited the sites to repeat the survey methods at the same time of year, the same start time in the day, and the

same methods and survey duration in order to measure the effects of mitigated development on wildlife. We structured the experiment in a before-after, control-impact experimental design, as some of the sites had been developed since our initial survey and some had remained undeveloped. We found that mitigated development resulted in a 66% loss of species on site, and 48% loss of species in the project area. Counts of vertebrate animals declined 90%. “Development impacts measured by the mean number of species detected per survey were greatest for amphibians (-100%), followed by mammals (-86%), grassland birds (-75%), raptors (-53%), special-status species (-49%), all birds as a group (-48%), non-native birds (-44%), and synanthropic birds (-28%). Our results indicated that urban development substantially reduced vertebrate species richness and numerical abundance, even after richness and abundance had likely already been depleted by the cumulative effects of loss, fragmentation, and degradation of habitat in the urbanizing environment,” and despite all the mitigation measures per existing policies and regulations. We also specifically tested for the effects of projects on wildlife in neighboring habitats, and found significant decreases in species richness and overall abundance in those areas as well. The proposed project would cause the same declines in wildlife abundance and species richness, and these would qualify as significant unmitigated cumulative impacts.

MITIGATION MEASURES

Before I comment specifically on the mitigation strategy, I will repeat myself that the formulation of appropriate mitigation can only follow an adequate survey effort for wildlife on and around the project site. The available protocol-level detection survey guidelines need to be implemented for multiple special-status species. The characterization of the plant and wildlife communities need to be sufficiently accurate to accurately characterize the existing environmental setting. This accuracy is needed to formulate the appropriate mitigation strategy.

BIO-1 Nesting Birds and Raptors. Initiate vegetation clearing activities outside the breeding season and otherwise perform preconstruction survey for nesting birds.

The FEIR’s premise for this measure appears on p. 4.3-44: “construction and operation of the project would not substantially limit reproductive capacity or reduce or eliminate the quantity or quality of raptor nesting or foraging habitat, or communal roosting areas.” This premise is indefensible and false.

If the project goes forward, preconstruction surveys for nesting birds should be performed. However, the survey would not detect all the available nests, nor would it prevent the loss of productive capacity I predict above under Habitat Loss. Bird nests are very difficult to locate, and requires sufficient survey time to identify behaviors typical of nesting and to track nesting birds back to the nest. In my experience, repeat surveys are needed through the breeding season to locate all nest sites. Starting a search for nests 7 days prior to construction would not suffice.

Furthermore, the mitigation language allows a single individual to make a subjective decision, outside the public's view, to determine the buffer area for any given species. This measure lacks objective criteria, and it is unenforceable.

BIO-2 Belding's Savannah Sparrow Avoidance. Initiate vegetation clearing activities outside the breeding season and otherwise perform preconstruction survey for nesting birds.

See my comments on BIO-1, because the issues are the same.

BIO-3 Tidewater Goby and Southern California Steelhead Habitat Protection

The provision of permits is not a legitimate mitigation measure unless the permitting agencies require mitigation as a condition of the permits. At this point, the public is unaware of what mitigation might be required.

BIO-4 Preconstruction Semi-Aquatic Species Survey

This measure requires preconstruction surveys without having first performed protocol-level detection surveys. Preconstruction surveys for most special-status species lack the rigor of detection surveys, and therefore lack the detection probabilities of detection surveys. The FEIR needs to be revised so that it includes the results of appropriate protocol-level detection surveys.

BIO-5 Biological Monitor and Worker Education

If the project goes forward, this measure should be implemented. However, it should also be understood that this measure would accomplish very little conservation benefit to the species at issue, and it would not mitigate for the losses of habitat and productive capacities resulting from the project.

No Mitigation for special-status species of insects and bats

The FEIR claims that the project operations would not adversely affect Monarchs, Crotch's bumble bee, or special-status species of bats. However, these claims are unsupported by the appropriate detection surveys. In fact, we did perform a bat survey, and in only 1.5 hours we detected 5 species of bats, including three special-status species of bats. By removing the habitat of these species, the project would cause significant impacts. The FEIR needs to be revised in order to add a mitigation strategy to minimize or offset the effects of habitat loss to Monarchs, Crotch's bumble bee, and multiple species of bats.

RECOMMENDED MEASURES

Road Mortality: Compensatory mitigation is needed for the increased wildlife mortality that would be caused by bird-window collisions and the project-generated road traffic in the region. I suggest that this mitigation can be directed toward funding research to identify fatality patterns and effective impact reduction measures such as reduced speed limits and wildlife under-crossings or overcrossings of particularly dangerous road segments. Compensatory mitigation can also be provided in the form of donations to wildlife rehabilitation facilities (see below).

Fund Wildlife Rehabilitation Facilities: Compensatory mitigation ought also to include funding contributions to wildlife rehabilitation facilities to cover the costs of injured animals that will be delivered to these facilities for care. Many animals would likely be injured by collisions with the building's windows and with automobiles traveling to and from the building.

Thank you for your consideration,

Shawn Smallwood, Ph.D.

Born May 3, 1963 in
Sacramento, California.
Married, father of two.

Ecologist

Expertise

- Finding solutions to controversial problems related to wildlife interactions with human industry, infrastructure, and activities;
- Wildlife monitoring and field study using GPS, thermal imaging, behavior surveys;
- Using systems analysis and experimental design principles to identify meaningful ecological patterns that inform management decisions.

Education

Ph.D. Ecology, University of California, Davis. September 1990.
M.S. Ecology, University of California, Davis. June 1987.
B.S. Anthropology, University of California, Davis. June 1985.
Corcoran High School, Corcoran, California. June 1981.

Experience

- 762 professional reports, including:
 - 90 peer reviewed publications
 - 24 in non-reviewed proceedings
- 646 reports, declarations, posters and book reviews
- 8 in mass media outlets
- 92 public presentations of research results

Editing for scientific journals: Guest Editor, *Wildlife Society Bulletin*, 2012-2013, of invited papers representing international views on the impacts of wind energy on wildlife and how to mitigate the impacts. Associate Editor, *Journal of Wildlife Management*, March 2004 to 30 June 2007. Editorial Board Member, *Environmental Management*, 10/1999 to 8/2004. Associate Editor, *Biological Conservation*, 9/1994 to 9/1995.

Member, Alameda County Scientific Review Committee (SRC), August 2006 to April 2011. The five-member committee investigated causes of bird and bat collisions in the Altamont Pass Wind Resource Area, and recommended mitigation and monitoring measures. The SRC reviewed the science underlying the Alameda County Avian Protection Program, and advised

the County on how to reduce wildlife fatalities.

Consulting Ecologist, 2004-2007, California Energy Commission (CEC). Provided consulting services as needed to the CEC on renewable energy impacts, monitoring and research, and produced several reports. Also collaborated with Lawrence-Livermore National Lab on research to understand and reduce wind turbine impacts on wildlife.

Consulting Ecologist, 1999-2013, U.S. Navy. Performed endangered species surveys, hazardous waste site monitoring, and habitat restoration for the endangered San Joaquin kangaroo rat, California tiger salamander, California red-legged frog, California clapper rail, western burrowing owl, salt marsh harvest mouse, and other species at Naval Air Station Lemoore; Naval Weapons Station, Seal Beach, Detachment Concord; Naval Security Group Activity, Skaggs Island; National Radio Transmitter Facility, Dixon; and, Naval Outlying Landing Field Imperial Beach.

Part-time Lecturer, 1998-2005, California State University, Sacramento. Instructed Mammalogy, Behavioral Ecology, and Ornithology Lab, Contemporary Environmental Issues, Natural Resources Conservation.

Senior Ecologist, 1999-2005, BioResource Consultants. Designed and implemented research and monitoring studies related to avian fatalities at wind turbines, avian electrocutions on electric distribution poles across California, and avian fatalities at transmission lines.

Chairman, Conservation Affairs Committee, The Wildlife Society--Western Section, 1999-2001. Prepared position statements and led efforts directed toward conservation issues, including travel to Washington, D.C. to lobby Congress for more wildlife conservation funding.

Systems Ecologist, 1995-2000, Institute for Sustainable Development. Headed ISD's program on integrated resources management. Developed indicators of ecological integrity for large areas, using remotely sensed data, local community involvement and GIS.

Associate, 1997-1998, Department of Agronomy and Range Science, University of California, Davis. Worked with Shu Geng and Mingua Zhang on several studies related to wildlife interactions with agriculture and patterns of fertilizer and pesticide residues in groundwater across a large landscape.

Lead Scientist, 1996-1999, National Endangered Species Network. Informed academic scientists and environmental activists about emerging issues regarding the Endangered Species Act and other environmental laws. Testified at public hearings on endangered species issues.

Ecologist, 1997-1998, Western Foundation of Vertebrate Zoology. Conducted field research to determine the impact of past mercury mining on the status of California red-legged frogs in Santa Clara County, California.

Senior Systems Ecologist, 1994-1995, EIP Associates, Sacramento, California. Provided consulting services in environmental planning, and quantitative assessment of land units for their conservation and restoration opportunities based on ecological resource requirements of 29 special-status species. Developed ecological indicators for prioritizing areas within Yolo County

to receive mitigation funds for habitat easements and restoration.

Post-Graduate Researcher, 1990-1994, Department of Agronomy and Range Science, *U.C. Davis*. Under Dr. Shu Geng's mentorship, studied landscape and management effects on temporal and spatial patterns of abundance among pocket gophers and species of Falconiformes and Carnivora in the Sacramento Valley. Managed and analyzed a data base of energy use in California agriculture. Assisted with landscape (GIS) study of groundwater contamination across Tulare County, California.

Work experience in graduate school: Co-taught Conservation Biology with Dr. Christine Schonewald, 1991 & 1993, UC Davis Graduate Group in Ecology; Reader for Dr. Richard Coss's course on Psychobiology in 1990, UC Davis Department of Psychology; Research Assistant to Dr. Walter E. Howard, 1988-1990, UC Davis Department of Wildlife and Fisheries Biology, testing durable baits for pocket gopher management in forest clearcuts; Research Assistant to Dr. Terrell P. Salmon, 1987-1988, UC Wildlife Extension, Department of Wildlife and Fisheries Biology, developing empirical models of mammal and bird invasions in North America, and a rating system for priority research and control of exotic species based on economic, environmental and human health hazards in California. Student Assistant to Dr. E. Lee Fitzhugh, 1985-1987, UC Cooperative Extension, Department of Wildlife and Fisheries Biology, developing and implementing statewide mountain lion track count for long-term monitoring.

Fulbright Research Fellow, Indonesia, 1988. Tested use of new sampling methods for numerical monitoring of Sumatran tiger and six other species of endemic felids, and evaluated methods used by other researchers.

Projects

Repowering wind energy projects through careful siting of new wind turbines using map-based collision hazard models to minimize impacts to volant wildlife. Funded by wind companies (principally NextEra Renewable Energy, Inc.), California Energy Commission and East Bay Regional Park District, I have collaborated with a GIS analyst and managed a crew of five field biologists performing golden eagle behavior surveys and nocturnal surveys on bats and owls. The goal is to quantify flight patterns for development of predictive models to more carefully site new wind turbines in repowering projects. Focused behavior surveys began May 2012 and continue. Collision hazard models have been prepared for seven wind projects, three of which were built. Planning for additional repowering projects is underway.

Test avian safety of new mixer-ejector wind turbine (MEWT). Designed and implemented a before-after, control-impact experimental design to test the avian safety of a new, shrouded wind turbine developed by Ogin Inc. (formerly known as FloDesign Wind Turbine Corporation). Supported by a \$718,000 grant from the California Energy Commission's Public Interest Energy Research program and a 20% match share contribution from Ogin, I managed a crew of seven field biologists who performed periodic fatality searches and behavior surveys, carcass detection trials, nocturnal behavior surveys using a thermal camera, and spatial analyses with the collaboration of a GIS analyst. Field work began 1 April 2012 and ended 30 March 2015 without Ogin installing its MEWTs, but we still achieved multiple important scientific advances.

Reduce avian mortality due to wind turbines at Altamont Pass. Studied wildlife impacts caused by 5,400 wind turbines at the world's most notorious wind resource area. Studied how impacts are perceived by monitoring and how they are affected by terrain, wind patterns, food resources, range management practices, wind turbine operations, seasonal patterns, population cycles, infrastructure management such as electric distribution, animal behavior and social interactions.

Reduce avian mortality on electric distribution poles. Directed research toward reducing bird electrocutions on electric distribution poles, 2000-2007. Oversaw 5 founts of fatality searches at 10,000 poles from Orange County to Glenn County, California, and produced two large reports.

Cook *et al.* v. Rockwell International *et al.*, No. 90-K-181 (D. Colorado). Provided expert testimony on the role of burrowing animals in affecting the fate of buried and surface-deposited radioactive and hazardous chemical wastes at the Rocky Flats Plant, Colorado. Provided expert reports based on four site visits and an extensive document review of burrowing animals. Conducted transect surveys for evidence of burrowing animals and other wildlife on and around waste facilities. Discovered substantial intrusion of waste structures by burrowing animals. I testified in federal court in November 2005, and my clients were subsequently awarded a \$553,000,000 judgment by a jury. After appeals the award was increased to two billion dollars.

Hanford Nuclear Reservation Litigation. Provided expert testimony on the role of burrowing animals in affecting the fate of buried radioactive wastes at the Hanford Nuclear Reservation, Washington. Provided three expert reports based on three site visits and extensive document review. Predicted and verified a certain population density of pocket gophers on buried waste structures, as well as incidence of radionuclide contamination in body tissue. Conducted transect surveys for evidence of burrowing animals and other wildlife on and around waste facilities. Discovered substantial intrusion of waste structures by burrowing animals.

Expert testimony and declarations on proposed residential and commercial developments, gas-fired power plants, wind, solar and geothermal projects, water transfers and water transfer delivery systems, endangered species recovery plans, Habitat Conservation Plans and Natural Communities Conservation Programs. Testified before multiple government agencies, Tribunals, Boards of Supervisors and City Councils, and participated with press conferences and depositions. Prepared expert witness reports and court declarations, which are summarized under Reports (below).

Protocol-level surveys for special-status species. Used California Department of Fish and Wildlife and US Fish and Wildlife Service protocols to search for California red-legged frog, California tiger salamander, arroyo southwestern toad, blunt-nosed leopard lizard, western pond turtle, giant kangaroo rat, San Joaquin kangaroo rat, San Joaquin kit fox, western burrowing owl, Swainson's hawk, Valley elderberry longhorn beetle and other special-status species.

Conservation of San Joaquin kangaroo rat. Performed research to identify factors responsible for the decline of this endangered species at Lemoore Naval Air Station, 2000-2013, and implemented habitat enhancements designed to reverse the trend and expand the population.

Impact of West Nile Virus on yellow-billed magpies. Funded by Sacramento-Yolo Mosquito and Vector Control District, 2005-2008, compared survey results pre- and post-West Nile Virus epidemic for multiple bird species in the Sacramento Valley, particularly on yellow-billed magpie and American crow due to susceptibility to WNV.

Workshops on HCPs. Assisted Dr. Michael Morrison with organizing and conducting a 2-day workshop on Habitat Conservation Plans, sponsored by Southern California Edison, and another 1-day workshop sponsored by PG&E. These Workshops were attended by academics, attorneys, and consultants with HCP experience. We guest-edited a Proceedings published in Environmental Management.

Mapping of biological resources along Highways 101, 46 and 41. Used GPS and GIS to delineate vegetation complexes and locations of special-status species along 26 miles of highway in San Luis Obispo County, 14 miles of highway and roadway in Monterey County, and in a large area north of Fresno, including within reclaimed gravel mining pits.

GPS mapping and monitoring at restoration sites and at Caltrans mitigation sites. Monitored the success of elderberry shrubs at one location, the success of willows at another location, and the response of wildlife to the succession of vegetation at both sites. Also used GPS to monitor the response of fossorial animals to yellow star-thistle eradication and natural grassland restoration efforts at Bear Valley in Colusa County and at the decommissioned Mather Air Force Base in Sacramento County.

Mercury effects on Red-legged Frog. Assisted Dr. Michael Morrison and US Fish and Wildlife Service in assessing the possible impacts of historical mercury mining on the federally listed California red-legged frog in Santa Clara County. Also measured habitat variables in streams.

Opposition to proposed No Surprises rule. Wrote a white paper and summary letter explaining scientific grounds for opposing the incidental take permit (ITP) rules providing ITP applicants and holders with general assurances they will be free of compliance with the Endangered Species Act once they adhere to the terms of a “properly functioning HCP.” Submitted 188 signatures of scientists and environmental professionals concerned about No Surprises rule US Fish and Wildlife Service, National Marine Fisheries Service, all US Senators.

Natomas Basin Habitat Conservation Plan alternative. Designed narrow channel marsh to increase the likelihood of survival and recovery in the wild of giant garter snake, Swainson’s hawk and Valley Elderberry Longhorn Beetle. The design included replication and interspersions of treatments for experimental testing of critical habitat elements. I provided a report to Northern Territories, Inc.

Assessments of agricultural production system and environmental technology transfer to China. Twice visited China and interviewed scientists, industrialists, agriculturalists, and the Directors of the Chinese Environmental Protection Agency and the Department of Agriculture to assess the need and possible pathways for environmental clean-up technologies and trade opportunities between the US and China.

Yolo County Habitat Conservation Plan. Conducted landscape ecology study of Yolo County to spatially prioritize allocation of mitigation efforts to improve ecosystem functionality within the County from the perspective of 29 special-status species of wildlife and plants. Used a hierarchically structured indicators approach to apply principles of landscape and ecosystem ecology, conservation biology, and local values in rating land units. Derived GIS maps to help guide the conservation area design, and then developed implementation strategies.

Mountain lion track count. Developed and conducted a carnivore monitoring program throughout California since 1985. Species counted include mountain lion, bobcat, black bear, coyote, red and gray fox, raccoon, striped skunk, badger, and black-tailed deer. Vegetation and land use are also monitored. Track survey transect was established on dusty, dirt roads within randomly selected quadrats.

Sumatran tiger and other felids. Upon award of Fulbright Research Fellowship, I designed and initiated track counts for seven species of wild cats in Sumatra, including Sumatran tiger, fishing cat, and golden cat. Spent four months on Sumatra and Java in 1988, and learned Bahasa Indonesia, the official Indonesian language.

Wildlife in agriculture. Beginning as post-graduate research, I studied pocket gophers and other wildlife in 40 alfalfa fields throughout the Sacramento Valley, and I surveyed for wildlife along a 200 mile road transect since 1989 with a hiatus of 1996-2004. The data are analyzed using GIS and methods from landscape ecology, and the results published and presented orally to farming groups in California and elsewhere. I also conducted the first study of wildlife in cover crops used on vineyards and orchards.

Agricultural energy use and Tulare County groundwater study. Developed and analyzed a data base of energy use in California agriculture, and collaborated on a landscape (GIS) study of groundwater contamination across Tulare County, California.

Pocket gopher damage in forest clear-cuts. Developed gopher sampling methods and tested various poison baits and baiting regimes in the largest-ever field study of pocket gopher management in forest plantations, involving 68 research plots in 55 clear-cuts among 6 National Forests in northern California.

Risk assessment of exotic species in North America. Developed empirical models of mammal and bird species invasions in North America, as well as a rating system for assigning priority research and control to exotic species in California, based on economic, environmental, and human health hazards.

**RE: City Council July 15, 2025, Meeting – Agenda Item C.3 –
Sywest Industrial Building Project (Case No. 17-121-DP) –
Final Environmental Impact Report (SCH# 2023040690)**

Dear Mayor Perotte, Honorable Councilmembers, and Brian Hiefield,

On behalf of the Western States Regional Council of Carpenters (“**Western States Carpenters**” or “**WSRCC**”), our firm is submitting these comments in connection with the City of Goleta’s (“**City**”) July 15, 2025, City Council meeting concerning the Sywest Industrial Building Project (“**Project**”) and the Final Environmental Impact Report (“**FEIR**”) associated therewith.

The Project, as proposed, would include construction of a 70,594 square foot industrial warehouse building with 60,939 square feet of landscaping, 101 parking spaces, six loading zones, and 10 bicycle parking spaces. The maximum building height would be 35 feet measured from the finished grade, with the site being raised 4-6 feet via soil fill to elevate the finished floor of the building above of the mapped 100-year floodplain encompassing the Project site. The floor area of the Project’s industrial warehouse building could potentially be divided into up to four sections and would be available for use by up to four tenants. Additionally, the Project’s original design request includes a buffer reduction of 75 feet (from 100’ to 25’) for the site’s adjacent streamside protection area (SPA).

The Project would also require demolition of an existing drive-in theater on the Project site, including the freestanding movie screen, concessions stand, projector

building, two drive-through ticket booths, one walk-in ticket booth, and an agricultural box, and removal of one of the site's dewatering wells.

Access to and from the Project site would continue to be provided from South Kellogg Avenue via an existing access road that runs along the northeast project boundary. The east curb of the existing driveway would be widened in order to provide an adequate maneuvering area for delivery trucks to enter and exit the project site.

The Project would also involve construction of a detention basin for stormwater runoff at the southern border of the development area, with a new 18-inch outfall to be constructed in the existing San Jose Creek concrete channel wall. To account for stormwater runoff for the northeastern portion of the Project site, a vegetated drainage swale would be constructed along the eastern side of the entry driveway, where stormwater would collect prior to discharge to the site's existing storm drain outlet located approximately 115 feet south of the intersection of South Kellogg Avenue and the entry driveway.

See NOA, pp. 1-2.

WSRCC represents thousands of union carpenters in Santa Barbara County and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

Individual members of WSRCC live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

WSRCC expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

WSRCC incorporates by reference all comments related to the Project or its CEQA review, including the Environmental Impact Report. See *Citizens for Clean Energy v. City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

Moreover, WSRCC requests that the City provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (**CEQA**) (Pub. Res. Code, § 21000 *et seq.*), and the California Planning and Zoning Law (“**Planning and Zoning Law**”) (Gov. Code, §§ 65000–65010). California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency’s governing body.

I. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY’S ECONOMIC DEVELOPMENT AND ENVIRONMENT

The City should require the Project to be built by contractors who participate in a Joint Labor-Management Apprenticeship Program approved by the State of California and make a commitment to hiring a local workforce.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

[L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California’s workforce can positively affect returns on climate mitigation efforts. In other words,

well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.¹

Furthermore, workforce policies have significant environmental benefits given that they improve an area's jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that the "[u]se of a local state-certified apprenticeship program" can result in air pollutant reductions.²

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.³

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.⁴ Some municipalities have even tied local hire and

³ California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, *available at* <https://cproundtable.org/static/media/uploads/publications/cpr-jobs-housing.pdf>

⁴ Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? *Journal of the American Planning Association* 72 (4), 475-490, 482, *available at* <http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf>.

other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city’s First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 (“**AB2011**”). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

II. THE CITY SHOULD IMPOSE TRAINING REQUIREMENTS FOR THE PROJECT’S CONSTRUCTION ACTIVITIES TO PREVENT COMMUNITY SPREAD OF COVID-19 AND OTHER INFECTIOUS DISEASES

Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupational Safety and Health Administration. Recently, several construction sites have been identified as sources of community spread of COVID-19.⁵

⁵ Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, *available at* <https://www.sccgov.org/sites/covid19/Pages/press-release-06-12-2020-cases-at-construction-sites.aspx>.

The Western States Carpenters recommend that the City adopt additional requirements to mitigate public health risks from the Project's construction activities. The Western States Carpenters requests that the City require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon the Western States Carpenters' experience with safe construction site work practices, the Western States Carpenters recommends that the City require that while construction activities are being conducted at the Project Site:

Construction Site Design:

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.
- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.
- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.
- Provide hand washing stations throughout the construction site.

Testing Procedures:

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.

- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody gaining entry to the project site such as returning personnel, deliveries, and visitors.
- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.
- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

Planning

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches)

communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.⁶

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The City should require that all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

The Western States Carpenters has also developed a rigorous Infection Control Risk Assessment (“**ICRA**”) training program to ensure it delivers a workforce that understands how to identify and control infection risks by implementing protocols to protect themselves and all others during renovation and construction projects in healthcare environments.⁷

ICRA protocols are intended to contain pathogens, control airflow, and protect patients during the construction, maintenance and renovation of healthcare facilities. ICRA protocols prevent cross contamination, minimizing the risk of secondary infections in patients at hospital facilities.

The City should require the Project to be built using a workforce trained in ICRA protocols.

III. THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

CEQA is a California statute designed to inform decision-makers and the public about the potential significant environmental effects of a project. 14 California Code of Regulations (“**CEQA Guidelines**”), § 15002, subd. (a)(1).⁸ At its core, its purpose

⁶ See also The Center for Construction Research and Training, North America’s Building Trades Unions (April 27 2020) NABTU and CPWR COVID-19 Standards for U.S. Construction Sites, *available at* https://www.cpwr.com/sites/default/files/NABTU_CPWR_Standards_COVID-19.pdf; Los Angeles County Department of Public Works (2020) Guidelines for Construction Sites During COVID-19 Pandemic, *available at* https://dpw.lacounty.gov/building-and-safety/docs/pw_guidelines-construction-sites.pdf.

⁷ For details concerning the Western States Carpenters’ ICRA training program, *see* <https://icrahealthcare.com/>.

⁸ The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 et seq., are regulatory guidelines promulgated by the state Natural Resources Agency

is to “inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made. Thus, the EIR ‘protects not only the environment but also informed self-government[.]’” *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564 (internal citation omitted).

To achieve this purpose, CEQA mandates preparation of an Environmental Impact Report (“**EIR**”) for projects so that the foreseeable impacts of pursuing the project can be understood and weighed. *Communities for a Better Environment v. Richmond* (2010) 184 Cal. App. 4th 70, 80. The EIR requirement “is the heart of CEQA.” CEQA Guidelines, § 15003(a).

CEQA directs public agencies to avoid or reduce environmental damage, when possible, by requiring alternatives or mitigation measures. CEQA Guidelines, § 15002, subds. (a)(2)-(3); see also *Berkeley Keep Jets Over the Bay Committee v. Board of Port Commissioners of the City of Oakland* (2001) 91 Cal.App.4th 1344, 1354; *Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 400. The Environmental Impact Report (EIR) serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to “identify ways that environmental damage can be avoided or significantly reduced.” CEQA Guidelines, § 15002, subd. (a)(2).

A public agency must prepare an EIR whenever substantial evidence supports a “fair argument” that a proposed project “may have a significant effect on the environment.” Pub. Res. Code, §§ 21100, 21151; CEQA Guidelines, §§ 15002, subds. (f)(1)-(2), 15063; *No Oil, supra*, 13 Cal.App.3d at p. 75; *Communities for a Better Environment v. California Resources Agency* (2002) 103 Cal.App.4th 98, 111-112. If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” and that any unavoidable significant effects on the environment are “acceptable due to overriding concerns” specified in Public Resources Code section 21081. See CEQA Guidelines, §§ 15092, subds. (b)(2)(A)-(B).

Essentially, should a lead agency be presented with a fair argument that a project may have a significant effect on the environment, the lead agency shall prepare an EIR

for the implementation of CEQA. Pub. Res. Code, § 21083. The CEQA Guidelines are given “great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous.” *Center for Biological Diversity v. Dept. of Fish & Wildlife* (2015) 62 Cal.4th 204, 217.

even though it may also be presented with other substantial evidence that the project will not have a significant effect. CEQA Guidelines, §§ 15064(f)(1)-(2); see *No Oil, supra*, 13 Cal.App.3d at p. 75 (internal citations and quotations omitted). Substantial evidence includes “enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached.” CEQA Guidelines, § 15384, subd. (a).

The EIR has been described as “an environmental ‘alarm bell’ whose purpose it is to alert the public and its responsible officials to environmental changes before they have reached ecological points of no return.” *Berkeley Keep Jets Over the Bay v. Bd. of Port Comm’rs.* (2001) 91 Cal. App. 4th 1344, 1354 (“*Berkeley Jets*”); *County of Inyo v. Yorty* (1973) 32 Cal. App. 3d 795, 810.

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. *Communities for a Better Environment v. Richmond* (2010) 184 Cal.App.4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 449-450). The EIR’s function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. *Id.* For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Id.*

A strong presumption in favor of requiring preparation of an EIR is built into CEQA. This presumption is reflected in what is known as the “fair argument” standard under which an EIR must be prepared whenever substantial evidence in the record supports a fair argument that a project may have a significant effect on the environment. *Quail Botanical Gardens Found., Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1602; *Friends of “B” St. v. City of Hayward* (1980) 106 Cal.3d 988, 1002.

Further, it is the duty of the lead agency, not the public, to conduct the proper environmental studies. “The agency should not be allowed to hide behind its own failure to gather relevant data.” *Sundstrom, supra*, 202 Cal.App.3d at p. 311.

“Deficiencies in the record may actually enlarge the scope of fair argument by lending a logical plausibility to a wider range of inferences.” *Ibid*; see also *Gentry v. City of*

Murrieta (1995) 36 Cal.App.4th 1359, 1382 (lack of study enlarges the scope of the fair argument which may be made based on the limited facts in the record).

Thus, refusal to complete recommended studies lowers the already low threshold to establish a fair argument. The court may not exercise its independent judgment on the omitted material by determining whether the ultimate decision of the lead agency would have been affected had the law been followed. *Environmental Protection Information Center v. Cal. Dept. of Forestry* (2008) 44 Cal.4th 459, 486 (internal citations and quotations omitted). The remedy for this deficiency would be for the trial court to issue a writ of mandate. *Ibid.*

While the courts review an EIR using an ‘abuse of discretion’ standard, the reviewing court is not to *uncritically* rely on every study or analysis presented by a project proponent in support of its position. *Berkeley Keep Jets, supra*, 91 Cal.App.4th at p. 1355 (quoting *Laurel Heights, supra*, 47 Cal.3d at pp. 391, 409 fn. 12) (internal quotations omitted). A clearly inadequate or unsupported study is entitled to no judicial deference. *Ibid.* Drawing this line and determining whether the EIR complies with CEQA’s information disclosure requirements presents a question of law subject to independent review by the courts. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 515; *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal.App.4th 48, 102, 131. As the First District Court of Appeal has previously stated, prejudicial abuse of discretion occurs if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process. *Berkeley Keep Jets, supra*, 91 Cal.App.4th at p. 1355 (internal quotations omitted).

Both the review for failure to follow CEQA’s procedures and the fair argument test are questions of law, thus, the de novo standard of review applies. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 435.

Whether the agency’s record contains substantial evidence that would support a fair argument that the project may have a significant effect on the environment is treated as a question of law. *Consolidated Irrigation Dist., supra*, 204 Cal.App.4th at p. 207; Kostka and Zischke, *Practice Under the Environmental Quality Act* (2017, 2d ed.) at § 6.76.

Section 15088.5(a) of the CEQA Guidelines provides that an EIR must be recirculated whenever there is disclosure of significant new information. Significant new information includes: (1) disclosure of a new significant environmental impact resulting from the project or from a new proposed mitigation measure; (2) disclosure

of a substantial increase in the severity of an environmental impact unless mitigation measures are adopted that reduce the impact to a level of insignificance; and (3) disclosure of a feasible project alternative or mitigation measure considerably different from others previously analyzed which would clearly lessen the significant environmental impacts of the project which the project proponents decline to adopt. *Id.*

Additionally, an EIR must be recirculated when it is so fundamentally inadequate and conclusory in nature that meaningful public review and comment is precluded. *Id.* (citing *Mountain Lion Coalition v. Fish & Game Com.* (1989) 214 Cal.App.3d 1043).

Here, as discussed below, the FEIR fails to substantiate all of its conclusions to allow meaningful public review and comment, provide adequate mitigation measures, and fully assess all pertinent environmental factors. Accordingly, this comment letter discloses significant new information, necessitating revision and recirculation of the FEIR.

IV. THE FEIR IS INADEQUATE UNDER CEQA AND SHOULD BE REVISED AND RECIRCULATED

A. The FEIR Fails to Support Its Findings with Substantial Evidence

CEQA requires that an EIR identify and discuss the significant effects of a Project, how those significant effects can be mitigated or avoided. CEQA Guidelines § 15126.2; PRC §§ 21100(b)(1), 21002.1(a). If a project has a significant effect on the environment, an agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” and that any unavoidable significant effects on the environment are “acceptable due to overriding concerns.” CEQA Guidelines § 15092(b)(2)(A–B). Such findings must be supported by substantial evidence. CEQA Guidelines § 15091(b).

When new information is brought to light showing that an impact previously discussed in the EIR but found to be insignificant with or without mitigation in the EIR’s analysis has the potential for a significant environmental impact supported by substantial evidence, the EIR must consider and resolve the conflict in the evidence. See *Visalia Retail, L.P. v. City of Visalia* (2018) 20 Cal.App.5th 1, 13, 17; see also *Protect the Historic Amador Waterways v. Amador Water Agency* (2004) 116 Cal. App. 4th 1099, 1109. While a lead agency has discretion to formulate standards for determining significance and the need for mitigation measures—the choice of any standards or

thresholds of significance must be “based to the extent possible on scientific and factual data and an exercise of reasoned judgment based on substantial evidence. CEQA Guidelines § 15064(b); *Cleveland Nat'l Forest Found. v. San Diego Ass'n of Gov'ts* (2017) 3 Cal. App. 5th 497, 515; *Mission Bay Alliance v. Office of Community Inv. & Infrastructure* (2016) 6 Cal. App. 5th 160, 206. And when there is evidence that an impact could be significant, an EIR cannot adopt a contrary finding without providing an adequate explanation along with supporting evidence. *East Sacramento Partnership for a Livable City v. City of Sacramento* (2016) 5 Cal. App. 5th 281, 302.

In addition, a determination that regulatory compliance will be sufficient to prevent significant adverse impacts must be based on a project-specific analysis of potential impacts and the effect of regulatory compliance. In *Californians for Alternatives to Toxics v. Department of Food & Agric.* (2005) 136 Cal. App. 4th 1, the court set aside an EIR for a statewide crop disease control plan because it did not include an evaluation of the risks to the environment and human health from the proposed program but simply presumed that no adverse impacts would occur from use of pesticides in accordance with the registration and labeling program of the California Department of Pesticide Regulation. *See also Ebbetts Pass Forest Watch v Department of Forestry & Fire Protection* (2008) 43 Cal. App. 4th 936, 956 (the fact that Department of Pesticide Regulation had assessed environmental effects of certain herbicides in general did not excuse failure to assess effects of their use for specific timber harvesting project).

Here, for the reasons discussed in detail below, the FEIR fails to comply with the foregoing requirements.

1. The FEIR Omits Critical Information in Its Analysis of the Project's Cumulative Impacts

An EIR must discuss a cumulative impact if the project's incremental effect combined with the effects of other projects is “cumulatively considerable.” 14 C.C.R. §15130(a). This determination is based on an assessment of the project's incremental effects “viewed in connection with the effects of ***past projects***, the effects of other current projects, and the effects of probable future projects.” 14 C.C.R. §15065(a)(3)(emphasis added); *Banning Ranch Conservancy v City of Newport Beach* (2012) 211 CA4th 1209, 1228. See also 14 C.C.R. §15355(b).

The CEQA Guidelines require that an EIR implement the provisions of Pub. Res. Code §21083(b)(2), which specifies that the Guidelines must include criteria requiring

public agencies to find that a project may have a significant effect on the environment if its possible effects “are individually limited but cumulatively considerable.”

The purpose of the cumulative impacts analysis is to avoid considering projects in a vacuum, because failure to consider cumulative harm may risk environmental disaster. *Whitman v Board of Supervisors* (1979) 88 Cal.App.3d 397, 408 (citing *Natural Resources Defense Council v Callaway* (2d Cir 1975) 524 F2d 79). Without this analysis, piecemeal approval of several projects with related impacts could lead to severe environmental harm. *Golden Door Props., LLC v County of San Diego* (2020) 50 Cal.App.5th 467, 527; *San Joaquin Raptor/Wildlife Rescue Ctr. v County of Stanislaus* (1994) 27 Cal.App.4th 713, 720; *Las Virgenes Homeowners Fed’n v County of Los Angeles* (1986) 177 Cal.App.3d 300, 306. An adequate analysis of cumulative impacts is particularly important when another related project might significantly worsen the project’s adverse environmental impacts. *Friends of the Eel River v Sonoma County Water Agency* (2003) 108 CA4th 859.

An EIR must discuss cumulative impacts when they are significant, and the project’s incremental contribution is “cumulatively considerable.” 14 C.C.R. §15130(a). A project’s incremental contribution is cumulatively considerable if the incremental effects of the project are significant “when viewed in connection with the effects of ***past projects***, the effects of other current projects, and the effects of probable future projects.” 14 C.C.R. §15065(a)(3) (emphasis added).

Here, the FEIR for the Project already notes that the Project (as proposed) is anticipated to have significant and unavoidable impacts singularly in the areas of Aesthetics, Biological Resources, Land Use and Planning, and Solid Waste and cumulatively in the impact area of Solid Waste. Despite the scope of significant impacts presented by the Project both individually and cumulatively, the FEIR contains no reference to or consideration whatsoever of several nearby ***past*** development projects (as required by 14 C.C.R. §15065(a)(3)) that have already been completed. Indeed, Table 3-1 of the FEIR lists the projects that the FEIR considered, in conjunction with the proposed Project, as part of its cumulative impacts analysis. See FEIR at pp. 3-3 – 3-4. However, the FEIR’s Cumulative Projects list omits numerous previously-completed large-scale nearby projects within the operative radius of the Project, and their associated environmental impacts, including the Santa Barbara Airport, the Goleta Sanitary District wastewater treatment facility, the La Goleta Gas Field and Gas Storage Field, the University of California – Santa Barbara, and nearby agricultural land uses. Indeed, the FEIR does not consider, address, and incorporate

the environmental review findings for any of the foregoing significant and environmentally-impactful past development projects, despite that these other major projects are all sited within approximately 1 mile of the proposed Project site. Moreover, the FEIR admits that its cumulative impacts analysis “was based on planned, pending, and reasonably foreseeable projects [in the vicinity of the Project area] at the time of the Notice of Preparation in April 2023,” and without regard to any past major projects in that same geographic vicinity, all in direct contravention of the CEQA Guidelines, 14 C.C.R. §15065(a)(3). See FEIR, p. 3-2.

These significant omissions taint and effectively undermine the validity of much of the cumulative impacts analysis set forth in the FEIR. Indeed, the failure to consider these previously-completed, significant, large-scale, industrial and/or institutional development projects in the immediate vicinity of the proposed Project, within the Coastal Zone, and directly proximate to the Goleta Slough State Marine Conservation Area and several creeks that outflow to the Pacific Ocean, undermines the FEIR’s cumulative impacts analysis as a whole. WSRCC has previously raised these issues concerning the deficiencies in the Project’s cumulative impacts analysis in response to the release of the Project’s FEIR, but to no avail, as the City’s Staff Report has not provided any response whatsoever or otherwise addressed these legitimate and fundamental concerns pertaining to the EIR for the Project.

WSRCC submits that the FEIR must now be revised with respect to each of the impact categories studied to incorporate any significant past projects within the operative cumulative projects radius, including the Santa Barbara Airport, the Goleta Sanitary District wastewater treatment facility, the La Goleta Gas Field and Gas Storage Field, the University of California – Santa Barbara, and nearby agricultural land uses in its cumulative impacts analysis. Absent such revision, the FEIR in its current form violates CEQA and cannot permissibly be certified by the City.

2. *The EIR Applies an Improper Baseline for its Biological Resources Analysis*

In analyzing a project’s impacts, an EIR must identify and describe “the physical environmental conditions in the vicinity of the project ***as they exist at the time the notice of preparation is published*** or if no notice of preparation is published, at the time environmental analysis commenced.” (14 CCR § 15125(a) [emph. added].) An accurate and current description of a project’s physical environmental conditions is critical to the viability of an EIR’s impact analysis because it establishes the baseline

against which that project's predicted environmental effects can be assessed and quantified. (14 CCR § 15125(a); *Neighbors for Smart Rail v. Exposition Metro Line Construction Authority* (2013) 57 Cal.4th 439, 447 (*Smart Rail*).) It is critical for an EIR to contain a proper description of important environmental resources that will be adversely affected by the project in order to put forth a legally adequate discussion of the environmental setting and impacts, with appropriate emphasis placed on rare or unique environmental resources located therein. (14 CCR § 15125(c); *San Joaquin Raptor/Wildlife Rescue Ctr. v County of Stanislaus* (1994) 27 Cal.App.4th 713, 722-30.) An EIR will be unable to properly measure the significance of a project's impacts unless the it first establishes the actual physical conditions on the project site. (*Save Our Peninsula Comm. v. Monterey Cty. Bd. of Supervisors*, 87 Cal. App. 4th 99, 125 (2001) (internal citations omitted).)

Here, the Notice of Preparation for the Project was published in May 2023, yet the EIR includes a 2017 report prepared by Tierney that purports to establish the baseline conditions for biological resources on the Project site. Indeed, the Tierney report is entirely based on site visits conducted six years prior to the publication of the Project's NOP, and there is no evidence presented in the EIR that an updated site visit was ever conducted to reassess the biological conditions on the Project site. As a result, the baseline for the assessment of biological resources impacts in the EIR for the project was never properly updated, and the outdated baseline that has been applied in the EIR violates CEQA.

B. The FEIR's Mitigation Measures Are Insufficient

A fundamental purpose of an EIR is to identify ways in which a proposed project's significant environmental impacts can be mitigated or avoided. Pub. Res. Code §§ 21002.1(a), 21061. To implement this statutory purpose, an EIR must describe any feasible mitigation measures that can minimize the project's significant environmental effects. PRC §§ 21002.1(a), 21100(b)(3); CEQA Guidelines §§ 15121(a), 15126.4(a).

If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” PRC §§ 21002; 21002.1, 21081; CEQA Guidelines §§ 15091, 15092(b)(2)(A); and find that ‘specific overriding economic, legal, social, technology or other benefits of the project outweigh the significant effects on the environment.” PRC §§ 21002; 21002.1, 21081; CEQA Guidelines §§ 15091, 15092(b)(2)(B). “A gloomy forecast of environmental

degradation is of little or no value without pragmatic, concrete means to minimize the impacts and restore ecological equilibrium.” *Environmental Council of Sacramento v. City of Sacramento* (2006) 142 Cal.App.4th 1018, 1039.

CEQA mitigation measures proposed and adopted are required to describe what actions will be taken to reduce or avoid an environmental impact. (CEQA Guidelines § 15126.4(a)(1)(B) [providing “[f]ormulation of mitigation measures should not be deferred until some future time.”].) While the same Guidelines section 15126.5(a)(1)(B) acknowledges an exception to the rule against deferrals, such exception is narrowly proscribed to situations where it is impractical or infeasible to include those details during the project's environmental review.

According to CEQA Guidelines, “[w]hen an EIR has been prepared for a project, the Responsible Agency shall not approve the project as proposed if the agency finds any feasible alternative or feasible mitigation measures within its powers that would substantially lessen or avoid any significant effect the project would have on the environment.” CEQA Guidelines Section 15096(g)(2).

Here, the FEIR’s mitigation measures for the Project are inadequate as follows:

1. The FEIR’s Mitigation Measures Are Improperly Deferred for Various Impact Categories

CEQA forbids deferred mitigation. Guidelines § 15126.4(a)(1)(B). CEQA allows deferral of details of a mitigation measure only “when it is impractical or infeasible to include those details during the project’s environmental review.” (*Id.*) CEQA further requires: “that the agency (1) commits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard...” Guidelines § 15126.4(a)(1)(B). Deferring formulation of a Project’s actual mitigation measures to some undefined time after the Project’s approval is improper and cannot be used as a substitute for proper mitigation under CEQA. Impermissible deferral can occur when an EIR calls for mitigation measures to be created based on future studies or describes mitigation measures in general terms but the agency fails to commit itself to specific performance standards. (*Preserve Wild Santee v. City of Santee* (2012) 210 Cal.App.4th 260, 281 [city improperly deferred mitigation to butterfly habitat by failing to provide standards or guidelines for its management].)

Here, the EIR improperly defers details of the Project’s mitigation measures as discussed in detail below. Moreover, despite WSRCC raising the below issues concerning the deficiencies in the Project’s Biological Resources, Hazards/Hazardous Materials, and Noise mitigation measures in response to the release of the FEIR, the City’s Staff Report has not provided any response whatsoever or otherwise addressed these concerns. WSRCC submits that the City must adequately respond to and address these issues before taking any action to certify the Project’s EIR or otherwise approve the Project.

i. Biological Resources Mitigation Measures

The Project’s Biological Resources Mitigation Measure BIO-3 provides as follows, in relevant part:

To avoid and minimize impacts to jurisdictional aquatic resources, tidewater goby critical habitat, and Southern California steelhead critical habitat the Applicant/Permittee must:

- A. Develop and receive approval from the Planning and Environmental Review Director or designee of a Toxic Materials Control and Spill Response Plan for materials that may be used/stored on-site, such as petroleum-based products, fuel and lubricants, and other potentially toxic materials prior to the issuance of the Zoning Clearance for grading or construction activities whichever is permitted first.

FEIR at p. ES-12.

Further, the Project’s Biological Mitigation Measure BIO-7 provides as follows, in relevant part:

The City-approved biologist (retained by the Applicant/Permittee) shall prepare an Invasive Species Control Plan for all construction equipment and activities within 100 feet of San Jose Creek.

...

Plan Requirements and Timing: The Invasive Species Control Plan shall be approved by the Planning and Environmental Review Director, or designee, prior to issuance of the Zoning Clearance for grading or building permits, whichever occurs first.

FEIR at p. ES-14.

Further still, the Project’s Biological Mitigation Measure BIO-9 provides as follows, in relevant part:

Prior to issuance of a Zoning Clearance for the building construction, the Applicant/Permittee shall submit a Landscape Chemical and Pest Management Plan to the Planning and Environmental Review, or designee, for review and approval.

FEIR at p. ES-15.

The above mitigation measures, on their face, defer the preparation of the Project’s Toxic Materials Control and Spill Response Plan (TMCSP), Invasive Species Control Plan (“ISCP”), and Landscape Chemical and Pest Management Plan (“LCPMP”) until after the CEQA environmental review process for the Project is completed, thereby denying the public and the City’s decisionmakers of the opportunity to assess the adequacy and comment upon said program/plan. Additionally, Mitigation Measures BIO-3, BIO-7, and BIO-9 improperly shift the burden of preparation of the mitigation plans to the Applicant, when it is in fact the City’s responsibility, as lead agency, to ensure that the preparation and implementation of the TMCSP, ISCP, and LCPMP.

Thus, in the context of MM BIO-3, MM BIO-7, and MM BIO-9, the City has failed to meet CEQA’s preconditions and requirements concerning mitigation, as the EIR has failed to show why the Project’s TMCSP, ISCP, and/or LCPMP cannot be completed or achieved at this time prior to adoption of the EIR, what impacts the measures will have individually or cumulatively, if those would indeed be feasible, and the specific performance criteria the Applicant will have to meet with regard to the measures. Accordingly, WSRCC reiterates that the proposed mitigation measures are improperly deferred as they defer the formulation of components of the mitigation to a later time, shift the burden to the Applicant, and further do not explain how the measures will clearly reduce the Project’s biological resources impacts to a level of insignificance.

ii. *Hazards and Hazardous Materials Mitigation Measures*

The Project’s Hazards and Hazardous Materials Mitigation Measure HAZ-1 provides as follows, in relevant part:

Prior to the issuance of Zoning Clearance associated with the demolition permit, the project applicant/Permittee shall prepare an asbestos abatement plan addressing the items/topics listed below. The asbestos abatement plan shall be reviewed and approved by the Santa Barbara County Air Pollution Control District (SBCAPCD). Proof of SBCAPCD approval shall be provided to the Planning and Environmental Review Director or designee.

See FEIR at p. ES-18.

Additionally, Hazards and Hazardous Materials Mitigation Measure HAZ-2 provides as follows, in relevant part:

Prior to the issuance of a Zoning Clearance associated with the demolition permit, the project applicant/Permittee shall prepare a lead based paint abatement plan. This plan can be combined with the plan required in Mitigation Measure HAZ-1. The lead based paint plan shall be reviewed and approved by the Planning and Environmental Review Director or designee.

FEIR at p. ES-19.

Further, Hazards and Hazardous Materials Mitigation Measure HAZ-3 provides as follows, in relevant part:

Prior to issuance of Zoning Clearance for construction or grading, the project applicant shall retain a qualified environmental consultant (Professional Geologist [PG] or Professional Engineer [PE]) to conduct a groundwater investigation of groundwater at the project site for potential contaminants of concern. The PG or PE shall prepare a groundwater investigation report, which shall be submitted to the City's Director of Planning and Environmental Review for review and approval prior to the issuance of the Zoning Clearance associated with grading permits.

FEIR at p. ES-19.

Further still, Hazards and Hazardous Materials Mitigation Measure HAZ-5 provides as follows, in relevant part:

The project applicant shall retain a qualified environmental consultant (Professional Geologist or Professional Engineer) approved by Santa Barbara County Environmental Health Services to prepare a Site Management Plan (SMP) prior to the issuance of Zoning Clearance associated with grading permit. The SMP, or equivalent document, shall be prepared to address on-site handling or management of impacted soils or groundwater if such soils or impacted wastes are encountered during the groundwater investigation or soil remediation, and reduce hazards to construction workers and offsite receptors during construction. The project applicant shall submit the SMP to the Santa Barbara County Environmental Health Services who shall review and approve the SMP. The project applicant shall submit proof of Santa Barbara County Environmental Health Services' approval of the SMP to the Director of Planning and Environmental Review or Designee.

FEIR at p. ES-20.

The above mitigation measures, on their face, defer the preparation of the Project's Asbestos Abatement Plan ("AAP"), Lead-Based Paint Abatement Plan ("LBPAP"), Site Management Plan ("SMP") and groundwater investigation until after the CEQA environmental review process for the Project is completed, thereby once again denying the public and the City's decisionmakers of the opportunity to assess the adequacy and comment upon such plans.

In the context of MM HAZ-1, HAZ-2, HAZ-3, and HAZ-5, the City has again failed to meet CEQA's preconditions and requirements concerning mitigation, as the FEIR has failed to show why a AAP, LBPAP, SMP, and/or a groundwater investigation cannot be completed or achieved at this time prior to adoption of the EIR, what impacts the measures will have individually or cumulatively, if those would indeed be feasible, and the specific performance criteria the Applicant will have to meet with regard to the measures. Accordingly, WSRCC maintains that the proposed mitigation measures are improperly deferred as they defers the formulation of components of the mitigation to a later time, shift the burden to the Applicant, and further do not explain how the measures will clearly reduce the hazards impacts to a level of insignificance.

iii. *Noise Mitigation Measures*

The Project's Noise Mitigation Measure NOI-1 provides as follows, in relevant part:

The construction contractor shall prepare and submit a Construction Noise Control Plan to the City of Goleta Planning and Environmental Review Director or designee for review and approval prior to issuance of a Zoning Clearance for a grading permit/demolition permit. The Construction Noise Control Plan shall specify the noise reduction measures to be implemented during project construction to ensure noise levels do not exceed 65 dBA at nearby sensitive receptors at the Rancho Goleta mobile home community to the east. The measures specified in the Construction Noise Control Plan shall be included on the building and grading plans and shall be implemented by the construction contractor during construction. Measures in the Construction Noise Control Plan may include, but would not be limited to, the following:

See FEIR at p. ES-22.

Once again, the above mitigation measure, on its face, defers the preparation of the Project's Noise Control Plan ("NCP") until after the CEQA environmental review process for the Project is completed, thereby denying the public and the City's decisionmakers of the opportunity to assess the adequacy and comment upon such plans.

In the context of MM NOI-1, the City has again failed to meet CEQA's preconditions and requirements concerning mitigation, as the EIR has failed to show why a NCP cannot be completed or achieved at this time prior to adoption of the EIR, what impacts the measure will have individually or cumulatively, if those would indeed be feasible, and the specific performance criteria the Applicant will have to meet with regard to the measure.

Further, the proposed mitigation measure is illusory given that it only requires that the Project Applicant submit the NCP at some future point which the City may then review. The measure further places the burden on the Applicant to "ensure" that the proposed changes result in a reduction of the Project's noise impacts. Simply put, the FEIR includes no definitive and measurable commitment to noise mitigation at all. Even under the EIR-related CEQA Guidelines section 15126.4(a)(1)(B), this is improper since, *inter alia*, the City does not commit to mitigation, but rather, relies on the Applicant to mitigate and leaves the entire scope of the noise mitigation to be

deployed on the Project in the Applicant’s discretion. This approach to mitigation further violates CEQA’s non-delegation provision. See CEQA Guidelines, § 15025, subd. (b)(2) (Delegation of Responsibilities).

WSRCC reiterates that the proposed mitigation measure is improperly deferred and illusory as it defers the formulation of components of the mitigation to a later time, shifts the burden and discretion over mitigation to the Applicant, and further does not analyze or explain how the measure will clearly reduce the Project’s noise impacts to a level of insignificance.

2. *The FEIR Fails to Adequately Address the Comments and Mitigation Proposed by the California Department of Fish and Wildlife.*

The California Department of Fish and Wildlife (“CDFW”) provided written comments on the Project’s DEIR, which raised concerns over the Project’s impacts on various plants and wildlife (including several special status species) and made multiple recommendations for mitigation measures to be incorporated in the final EIR. However, the FEIR has failed, without adequate explanation, justification, and analysis, to adopt the recommendations made by CDFW.

“Where comments from responsible experts or sister agencies disclose new or conflicting data or opinions that cause concern that the agency may not have fully evaluated the project and its alternatives, these comments may not simply be ignored. There must be good faith, reasoned analysis in response.” *Berkeley Keep Jets Over the Bay Com. v. Board of Port Cmrs.*, (2001) 91 Cal.App.4th 1344, 1367 (“*Berkeley Jets*”) (EIR found inadequate due to failure to respond to expert evidence on toxic air contaminants). A lead agency is required to respond to comments and provide specific explanation of its reasons for rejecting suggestions received in comments and for proceeding with a project despite its environmental impacts. Such explanations require support from specific references to empirical information, scientific authority, and/or explanatory information. *Cleary v. County of Stanislaus* (1981) 118 Cal.App.3d 348, 357. Further, the responses rejecting the sister agency comments/recommendations must demonstrate a good faith, reasoned analysis undertaken by the lead agency, and conclusory statements lacking factual support are insufficient. *People v. County of Kern* (1974) 39 Cal.App.3d 830, 841. A reasoned, factual response is especially requisite when critical comments are submitted by other agencies or by

experts. See *Berkeley Jets*, 91 Cal.App.4th at 1367, 1371; *People v. County of Kern* (1976) 62 Cal.App.3d 761, 772.

Here, CDFW specifically identified deficiencies in the DEIR's mitigation measure pertaining to Belding's savannah sparrow (MM BIO-2), and further noted that the EIR needed to incorporate additional mitigation associated with (1) coordination with CDFW and obtaining take authorization if Belding's sparrow is detected during survey efforts, (2) conducting focused pre-construction surveys for Crotch's bumble bee (based on its potential to occur on the Project site due to suitable habitat), and (3) restricting the Project to use of only native plant species in its landscaping. CDFW's comments on these issues constituted substantial evidence that the biological resources impacts of the Project on these issues will be significant and that the Project's current biological resources mitigation is insufficient to prevent a significant impact, such that the EIR requires revision and recirculation to address these noted deficiencies in its analysis and mitigation. However, rather than provide careful and detailed analysis of its basis for ignoring CDFW's concerns on these issues, the FEIR simply dismissed CDFW's comments and proposals in a conclusory fashion. In this regard, the Project's FEIR remains inadequate and in violation of CEQA, such that the City must not approve the Project and certify its EIR in its current form.

C. The City Should Not Adopt the Project as Proposed, and Should Only Consider Potential Adoption of Project Alternative 2

Notwithstanding the deficiencies in the FEIR identified above, as part of its alternative analysis for the Project, the FEIR included analysis of a Project Alternative 2, which provided for construction of a project of the same size, but while incorporating the required 100-foot setback for the Streamside Protection Area ("SPA") adjacent to the Project, rather than the original Project's pursuit of/request for relief from the required 100-foot SPA buffer to allow construction as close as 25 feet from the SPA. See FEIR, pp. 6-4 – 6-7. In considering the relative impacts of Alternative 2 as compared to the Project as originally proposed, the FEIR ultimately found as follows:

Alternative 2 would reduce the proposed project's significant and unavoidable impact to biological resources to a less than significant level by complying with the 100-foot SPA buffer. Alternative 2 would result in a greater noise impact compared to the proposed project and would marginally increase greenhouse gas emissions and energy use during

construction compared to the proposed project, although impacts would remain less than significant with mitigation. Alternative 2 would result in similar impacts to all other issue areas, including significant and unavoidable impacts related to aesthetics and solid waste disposal. However, unlike Alternative 3, Alternative 2 would fulfill all of the project objectives.

See FEIR, p. 6-112.

Given that the FEIR has determined that Alternative 2 would fulfill all of the Project's objectives, while also reducing the Project's significant and unavoidable biological resources impacts to a less than significant level, WSRCC submits that the City must reject the Project as proposed, and should only consider approval of the Project as constituted in Alternative 2, subject to correction of the other deficiencies in the FEIR as identified herein. In this regard, any adoption by the City of a Statement of Overriding Considerations for the Project as originally proposed will lack the requisite evidentiary support and result in a superficial violation of CEQA.

V. CONCLUSION

Based on the foregoing concerns, WSRCC resubmits that the City should require revision and recirculation of the FEIR for the Project pursuant to CEQA. Absent doing so, the FEIR in its current form directly violates CEQA in multiple respects. Further still, the City should not approve the Project as proposed based on the environmentally-superior alternatives set forth in the FEIR. If the City should have any questions or concerns, please do not hesitate to contact this office.

Sincerely,

Jeremy Herwitt

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise ("SWAPE") is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas ("GHG") emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model ("CalEEMod") is a "statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects."¹ CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.²

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.³

¹ "California Emissions Estimator Model." CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

² "California Emissions Estimator Model." CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

³ "CalEEMod User's Guide." CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled (“VMT”) associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.⁴

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

$$\text{“VMT}_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i) _n$$

Where:

n = Number of land uses being modeled.”⁵

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

$$\text{“Emissions}_{\text{pollutant}} = \text{VMT} * \text{EF}_{\text{running,pollutant}}$$

Where:

$\text{Emissions}_{\text{pollutant}}$ = emissions from vehicle running for each pollutant

VMT = vehicle miles traveled

$\text{EF}_{\text{running,pollutant}}$ = emission factor for running emissions.”⁶

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.⁷ In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act (“CEQA”) requires that such changes be justified by substantial evidence.⁸ The default number of construction-related worker trips is calculated by multiplying the

⁵ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.

⁶ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.

⁷ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

⁸ CalEEMod User Guide, available at: <http://www.caleemod.com/>, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.⁹ Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively.”¹⁰ Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.¹¹ The operational home-to-work vehicle trip lengths are:

“[B]ased on the location and urbanization selected on the project characteristic screen. These values were supplied by the air districts or use a default average for the state. Each district (or county) also assigns trip lengths for urban and rural settings” (emphasis added).¹²

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).¹³

Worker Trip Length by Air Basin		
Air Basin	Rural (miles)	Urban (miles)
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
Average	16.47	11.17
Minimum	10.80	10.80

¹³ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8- miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7- miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan (“Project”) located in the City of Claremont (“City”). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.¹⁴ In an effort to evaluate the potential for a local hire provision to reduce the Project’s construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,623
Amortized Construction GHG Emissions (MT CO ₂ e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,024
Amortized Construction GHG Emissions (MT CO ₂ e/year)	100.80
% Decrease in Construction-related GHG Emissions	17%

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project’s urbanization level and location.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

EXHIBIT B

Paul Rosenfeld, Ph.D.

Principal Environmental Chemist

Chemical Fate and Transport & Air Dispersion Modeling

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H₂O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Paul Rosenfeld Ph.D. (September 26-27, 2005). Fate, Transport and Persistence of PDBEs. *Mealey's Groundwater Conference*. Lecture conducted from Ritz Carlton Hotel, Marina Del Ray, California.

Paul Rosenfeld Ph.D. (June 7-8, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. *International Society of Environmental Forensics: Focus On Emerging Contaminants*. Lecture conducted from Sheraton Oceanfront Hotel, Virginia Beach, Virginia.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Fate Transport, Persistence and Toxicology of PFOA and Related Perfluorochemicals. *2005 National Groundwater Association Ground Water And Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, Toxicology and Remediation. *2005 National Groundwater Association Ground Water and Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. and Rob Hesse R.G. (May 5-6, 2004). Tert-butyl Alcohol Liability and Toxicology, A National Problem and Unquantified Liability. *National Groundwater Association. Environmental Law Conference*. Lecture conducted from Congress Plaza Hotel, Chicago Illinois.

Paul Rosenfeld, Ph.D. (March 2004). Perchlorate Toxicology. *Meeting of the American Groundwater Trust*. Lecture conducted from Phoenix Arizona.

Hagemann, M.F., **Paul Rosenfeld, Ph.D.** and Rob Hesse (2004). Perchlorate Contamination of the Colorado River. *Meeting of tribal representatives*. Lecture conducted from Parker, AZ.

Paul Rosenfeld, Ph.D. (April 7, 2004). A National Damage Assessment Model For PCE and Dry Cleaners. *Drycleaner Symposium. California Ground Water Association*. Lecture conducted from Radison Hotel, Sacramento, California.

Rosenfeld, P. E., Grey, M., (June 2003) Two stage biofilter for biosolids composting odor control. *Seventh International In Situ And On Site Bioremediation Symposium Battelle Conference* Orlando, FL.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. (February 20-21, 2003) Understanding Historical Use, Chemical Properties, Toxicity and Regulatory Guidance of 1,4 Dioxane. *National Groundwater Association. Southwest Focus Conference. Water Supply and Emerging Contaminants..* Lecture conducted from Hyatt Regency Phoenix Arizona.

Paul Rosenfeld, Ph.D. (February 6-7, 2003). Underground Storage Tank Litigation and Remediation. *California CUPA Forum*. Lecture conducted from Marriott Hotel, Anaheim California.

Paul Rosenfeld, Ph.D. (October 23, 2002) Underground Storage Tank Litigation and Remediation. *EPA Underground Storage Tank Roundtable*. Lecture conducted from Sacramento California.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Understanding Odor from Compost, *Wastewater and Industrial Processes. Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Using High Carbon Wood Ash to Control Compost Odor. *Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Grey, M. A. (September 22-24, 2002). Biocycle Composting For Coastal Sage Restoration. *Northwest Biosolids Management Association*. Lecture conducted from Vancouver Washington..

Rosenfeld, P.E. and Grey, M. A. (November 11-14, 2002). Using High-Carbon Wood Ash to Control Odor at a Green Materials Composting Facility. *Soil Science Society Annual Conference*. Lecture conducted from Indianapolis, Maryland.

Rosenfeld. P.E. (September 16, 2000). Two stage biofilter for biosolids composting odor control. *Water Environment Federation*. Lecture conducted from Anaheim California.

Rosenfeld. P.E. (October 16, 2000). Wood ash and biofilter control of compost odor. *Biofest*. Lecture conducted from Ocean Shores, California.

Rosenfeld, P.E. (2000). Bioremediation Using Organic Soil Amendments. *California Resource Recovery Association*. Lecture conducted from Sacramento California.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. *Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings*. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., and C.L. Henry. (1999). An evaluation of ash incorporation with biosolids for odor reduction. *Soil Science Society of America*. Lecture conducted from Salt Lake City Utah.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Comparison of Microbial Activity and Odor Emissions from Three Different Biosolids Applied to Forest Soil. *Brown and Caldwell*. Lecture conducted from Seattle Washington.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest*. Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The District of New Jersey

Duarte et al, *Plaintiffs*, vs. United States Metals Refining Company et. al. *Defendant*.

Case No.: 2:17-cv-01624-ES-SCM

Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division

M/T Carla Maersk, *Plaintiffs*, vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS “Conti Perdido”
Defendant.

Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237

Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants

Case No.: No. BC615636

Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants

Case No.: No. BC646857

Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado

Bells et al. Plaintiff vs. The 3M Company et al., Defendants

Case: No 1:16-cv-02531-RBJ

Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District

Phillip Bales et al., Plaintiff vs. Dow Agrosiences, LLC, et al., Defendants

Cause No 1923

Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa

Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants

Cause No C12-01481

Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois

Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants

Case No.: No. 0i9-L-2295

Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles

Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC

Case No.: LC102019 (c/w BC582154)

Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division

Brenda J. Cooper, et al., *Plaintiffs*, vs. Meritor Inc., et al., *Defendants*

Case Number: 4:16-cv-52-DMB-JVM

Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al., et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action NO. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward
DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City
Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas

Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant*.

Case Number cc-11-01650-E

Rosenfeld Deposition: March and September 2013

Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio

John Michael Abicht, et al., *Plaintiffs*, vs. Republic Services, Inc., et al., *Defendants*

Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)

Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division

Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs*, vs. BP Products North America, Inc., *Defendant*.

Case 3:10-cv-00622

Rosenfeld Deposition: February 2012

Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland

Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants

Case Number: 03-C-12-012487 OT

Rosenfeld Deposition: September 2013

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

**Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review**

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Colorado.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal representatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

Hagemann, M.F., 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

Hagemann, M.F., 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

Hagemann, M.F., 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

Hagemann, M.F., 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublished report.

Hagemann, M.F., 2001. Estimated Cleanup Cost for MTBE in Groundwater Used as Drinking Water. Unpublished report.

Hagemann, M.F., 2001. Estimated Costs to Address MTBE Releases from Leaking Underground Storage Tanks. Unpublished report.
