

TO: Chair and Commissioners
SUBMITTED BY: Luz “Nina” Buelna, Interim Public Works Director
PREPARED BY: Paul Medel, Public Works Manager
SUBJECT: Overview of Street Tree Inventory

RECOMMENDATION:

Receive and file a report regarding the overview of street tree inventory.

BACKGROUND:

Arbor Access Tree Trimming Data Software

On July 1, 2022, the City of Goleta entered into a tree maintenance agreement with West Coast Arborist. As part of the agreement, the scope included implementing a new tree data inventory software system for City staff. West Coast Arborist utilizes a software system, Arbor Access, which tracks tree data inventory in various categories. The different types of data detailed within their software include tree stumps, dead trees, seedlings, diseased/declining, and poorly structured trees.

Additionally, this software displays maps of tree inventory, work history, list management, vacancies, and inventory of individual species, among other items. This software provides the City of Goleta with data that helps with the management of the urban forest. This resource will also prove valuable as the City moves forward with a tree-planting program to fill vacancies in individual zones or neighborhoods.

The Public Works Street Maintenance Division staff works closely with West Coast Arborist staff to maintain City trees along its parkway strips, center median islands, and throughout the City and keep the City’s inventory updated.

DISCUSSION:

The City of Goleta's Arbor Access software data inventory program is designed to manage the inventory and tree trimming data for the Public Works Street Maintenance Division. The Streets Division Manager and a West Coast Arborist representative will briefly overview the tree data inventory program.
